Brief Introduction:

S'ermorelin / S'ermorelin Acetate is a truncated analog of GRF 1-44 that is naturally produced by the brain to stimulate pituitary production. The increased volume produced by the pituitary gland causes an increase in the production of Insu-Like Growth Factor-1 by the liver and results in the benefits of treatment provided to the adult patient.

S'ermorelin / S'ermorelin acetate shares similar structure, is a bio-identical synthetic hormone that is extremely effective in increasing the amount of G H. S'ermorelin acetate is a recently synthesized (man-made) peptide analogue of a naturally occurring hormone that is produced in the hypothalamus and stimulates and controls the production within the pituitary gland.
