MF	C78H123N23O23S2
EINECS NO.	unavailable
Purity	99%
Appearance	White
Place of origin	China
MOQ	1box
Storage	below 8°C

Brief Introduction:

AOD 9604 is an analog of the growth hormone-releasing factor (GRF) which signals the effects of growth hormone.

It is a 15-mer peptide residue of the C-terminus of HGH to which tyrosine is added at the N-terminal end. This synthetically produced hormone is very common to weightlifters and bodybuilders because of a number of physical benefits. Studies claimed that it actually acts on the reduction of excessive adipose tissues such as those in the abdominal area, increase in muscle mass, and enhances the lipid content of the body.

It's a region of high accessibility to proteases and also rich in proline, have been demonstrated to affect the conformational change in the cytoplasmic domain of the band 3 of erythrocyte membrane protein by serving as the hinge for the pivoting of the two subdomains.

This then suggest that such residue is significant in conformational changes by serving as sites for peripheral protein binding in some body cells.

Application:

The synthetic peptide weight loss drugs derived from the carbon end fragment of HGH have the effect of HGH to stimulate the metabolism of adipose cells, but no adverse reactions, and can effectively reduce the weight of obese patients

Function:

1. AOD9604 actually acts on the reduction of excessive adipose tissues such as those in the abdominal area.
2. Increase in muscle mass.
3. Enhances the lipid content of the body.
