Brief Introduction:

Triptorelin C₆₄H₈₂N₁₈O₁₃, Pyr-His-Trp-Ser-Tyr-D-Trp-Leu-Arg-Pro-Gly-NH₂ is a synthetic analogue of gonadorelin (GnRH). As a result of the substitution of the 6th amino acid residue in the native molecule, the agonistic effect is more pronounced and the plasma half-life prolonged.

Triptorelin Acetate is used as a GnRH agonist. It decreases pituitary secretion of gonadotropins luteinizing hormone (LH) and follicle-stimulating hormone (FSH) by causing constant stimulation of the pituitary. Triptorelin may be used in the treatment of hormone-responsive cancers such as breast cancer or prostate cancer, precocious puberty, estrogen-dependent conditions, and assisted reproduction.

Function:

Triptorelin is a GNRH agonist shown to inhibit estradiol-induced cancer cell proliferation in vivo.

1. Triptorelin can improve the pregnancy rate by 12% to 15% in ewes and downregulate ovarian GNRHR-I expression of female rats, especially in late-growing follicles.
2. Triptorelin immunity blocked EET and UWT, inhibited uterine growth and development and enhance the expression levels of ESR1, LHR, and FSHR proteins.
3. Triptorelin may be used in the treatment of hormone-responsive cancers such as breast cancer or prostate cancer, precocious puberty, estrogen-dependent conditions, and assisted reproduction.
