Brief Introduction:

HGH 191AA is the anterior pituitary growth hormone (HGH), growth hormone (HGH 191aa) containing eosinophilic granular secretory cells secrete, consisting of hgh 191aa amino acid peptide hormone. This product is made by genotype secretion of recombinant. coli expression technology in the production of recombinant human growth hormone (HGH 191aa), the amino acid content and sequence of growth hormone are exactly the same with people. This product is in escherichia coli (e.c. with our fabrication: oli) in the composite. Synthesis was conducted by former hormone (prehormone). The former hormone is by nature exists in bacteria, growth hormone, which is connected with signal peptide. Hormone split in the bacterial cell wall, before release and natural growth hormone is exactly the same end products into the wall of the intermembrane space, and then destroy the cell walls to collect, only the intact cell wall, to ensure the end products rarely bacterial protein pollution.
