Product Description

What is 189691-06-3 Bremelanotide PT 141 Peptide 2mg 5mg 10mg For Sexual Dysfunction?

Basic Information Form:

Product Name	Bremelanotide PT 141 Peptide 2mg 5mg 10mg For Sexual Dysfunction
Cas No.	189691-06-3
Assay	99%
Appearance	White powder
MF	C ₇ H ₁₅ NO ₄
MW	177.198
Shelf Life	2 years

Brief Introduction:

PT141 or Bremelanotide is the generic term for a research peptide being studied for its possible use in helping to improve sexual dysfunction in both men (erectile dysfunction or impotence) and women (sexual arousal disorder).

PT-141 is a synthetic amino acid protein discovered during clinical trials using the Melanotan 2 for sunless tanning, photo-protection results from melanotans. Participants were documented as having experienced aphrodisiac reactions, leading to the further development PT-141. The melanocortin system targets receptors associated with desire through the melanocyte stimulating hormone paths that cross the blood-brain-barrier. Potentially the powerful sex-drug results feeling an aphrodisiac experience amplifying arousal pt141 reviews have shown the ability to increase libido effects of both men and women.

PT141 was developed from the tanning peptide Melanotan 2, which is a synthetically produced variant of a peptide hormone naturally produced in the body that stimulates melanogenesis that is known as alpha-Melanocyte stimulating hormone.

MSH, activates certain melanocortin receptors in the process of exerting its effects.

Applications:

PT-141 functions by activating the melanocortin 1 receptor and MC4R namely. Bremelanotide originally was tested for nasal spray delivery but was discontinued after concerns about side effects. Bremelanotide PT141, as Melanotan II, may cause spontaneous arousal enhancing effect. Unlike other supplements, PT 141 results do not act on the vascular body, but directly increases desires through the nervous system.

PT-141 or Bremelanotide is the generic term for a peptide being studied for its possible use in helping to improve sexual dysfunction in both men (erectile dysfunction or impotence) and women (sexual arousal disorder). PT-141 has a similar structure to Melanotan-II and is a synthetic analogue of alpha-Melanocyte stimulating hormone (α -MSH). Alpha-MSH is an endogenous peptide that has potential influence over lipid metabolism, appetite, and sexual libido. PT-141 is a potential remedy for the treatment of sexual dysfunction and studies have shown that PT-141 does not act on the vascular system like former compounds, but allegedly works by activating melanocortin receptors in the brain, therefore helping increase ones sexual stimulation.
