Brief Introduction:

CJC-1295 DAC, also known as growth hormone releasing factor (GRF MOD (1-29) or GRF), is an analogue of GHRH (growth hormone releasing hormone).

CJC-1295 DAC is a GHRH (long 44-amino acid version) that removes 15 amino acids, so a total of 29 amino acids, and binds to A DAC which is also known as the drug-affinity complex, and CJC-1295 is commonly known as the GHRH drug-affinity complex, which basically extends its life span.

The difference between the CJC-1295 and CJC-1295 DAC is the CJC-1295 DAC version CJC-1295 DAC plus the so-called CJC-1295. Drug-affinity complex (DAC) can significantly prolong its action and action. This means that the product will remain in vivo for much longer than the usual duration for CJC-1295 (without DAC), i.e. up to 14 days.
