Product Description

What is CAS 317318-70-0 Sarms Powder GW 501 516 for Muscle Building 50mg/vial?

GW501516 is a selective agonist (activator) of the PPAR δ receptor. It displays high affinity ($K_i = 1$ nM) and potency ($EC_{50} = 1$ nM) for PPAR δ with > 1000 fold selectivity over PPAR α and PPAR γ . It activates the same pathways activated through exercise, including PPAR δ and AMP-activated protein kinase. It had been investigated as a potential treatment for obesity, diabetes, dyslipidemia and cardiovascular disease. GW501516 has a synergistic effect when combined with AICAR: the combination has been shown to significantly increase exercise endurance in animal studies more than either compound alone.

Application:

1. Endurance: It is recommended stacking cardarine with AICAR and/or Equipoise. This is the ultimate endurance stack that will turn you into a race horse.
2. Fat loss: The best shredder stack would be stacking cardarine with S4 (Andarine). This is a well known potent 'cutting'

stack.

3. Anabolic steroid stack: If you run moderate doses of anabolic steroids, or you run any harsh compound like trenbolone, then cardarine will aid in not only your lipids, but also with your ability to 'catch your wind.' Therefore, cardarine is a perfect stack for trenbolone, which makes many athletes lose their breath fast.

4. During PCT (post cycle therapy) or bridge: Since cardarine is not hormonal, it is in no way suppressive. Hence, you should not be scared of using it to keep fat off and improve your workouts between cycles during your bridge and PCT.

5. SARMS triple stack: If you want aato recomp, cardarine stacks beautifully with S4 and MK-2866.
