Brief Introduction:

Ipamorelin (or NNC 26-0161) belongs to regulatory peptides because it is GH releasing protein; Its chain is quite short and only consists of five amino acids. Its molecular mass/weight is 711.86 and its molecular formula is C₃₈H₄₉N₉O₅. Ipamorelin was synthesized as innovative and novelty mimetic of ghrelin therefore it possesses ability to enhance gastric motility.

Benefits of using Ipamorelin include increased fat-burning rate, maintenance of lean muscle tissue, recovery and strengthening of joints, connective tissue and bone mass, as well as other anti-aging benefits associated with GH therapy, such as improved skin and hair quality. When the secretion of natural GH is inhibited by long-term use of exogenous GH, it can also be used to protect and improve the level of autocrine GH.

**Dosage and Usage:**

Ipamorelin, like other peptides, comes as a freeze dried powder that is very delicate. You can store it in the refrigerator or at room temperature before reconstituting. Once reconstituted with bacteriostatic water, the vials must be stored in a cool dry place like your refrigerator. Insulin syringes are the best way to administer it, usually via subcutaneous injection.

Of course, using IPamorelin with a GHRH like CJC w/out DAC will give the user the biggest increase in GH and IGF-1 as GHRP's and GHRH's work together synergetically. The average dosing for Ipamorelin is 200-300mcg two to three times daily. Twelve week cycles are quite normal and PCT would be very minimal - mini-pct is fine. If prolactin issues ever arise, there are products that help reduce prolactin and estrogen-like symptoms.

The recommended effective dose is 1mcg/kg of bodyweight (100mcg for a man weighing 100kg). It elevates GH levels for about 3.5 hours after subcutaneous injection, and best results are obtained when using 3 or 4 doses per day. For those who wish to use it only once a day for anti-aging purposes, the best time to use it is right before bed, preferably with a GHRH. Ipamorelin has a synergistic effect when administered during a natural GH pulse and optimal times for use are at night right before bed, pre workout or immediately post workout, and first thing in the morning.

Function:

1. Increase fat burning rate
2. Maintain lean muscle tissue
3. Restores and strengthens joints, connective tissue, and bone mass
4. Improve skin and hair quality
5. Protect and improve the level of autocrine GH
