

99% Male Enhancement Powder Testosterone for Erectile Dysfunction

Our Product Introduction

Basic Information

- Place of Origin: China
- Brand Name: Hongbaiyi
- Certification: COA, HPLC MR
- Model Number: HBY-Testosterone
- Minimum Order Quantity: 1 kg
- Price: Negotiable
- Packaging Details: Aluminum Bag or 25kg Fibre Drum
- Delivery Time: 3-5 work days after your payment
- Payment Terms: , Western Union, T/T
- Supply Ability: 4000kg/Month

Product Specification

- Product: Testosterone Propionate
- CAS: 57-85-2
- Color: White
- Material: Powder
- MF: C45h55n9o6
- MW: 344.49
- Storage: -20-4
- MOQ: 1kg
- Highlight: Male Enhancement Testosterone Powder , COA Testosterone Powder , 99% Erectile Dysfunction Powderpowder

Product Description

99% Testosterone Propionate Raw Powder Steroids For Erectile Dysfunction

Brief Introduction:

Testosterone propionate was first born in 1935. In a series of experiments, propionate was used to increase the therapeutic use of testosterone by slowing the release of testosterone into the serum. Two years later, Schering, Germany, will launch the first testosterone propionate product called Testoviron. Testosterone propionate was also the first commercially available injectable testosterone ester on the prescription drug market in the United States, and before 1960 was still the main form of injectable testosterone-like products in the world. For example, in the early 1950s, when steroids were first tested by a small number of American athletes, the only anabolic/androgenic steroids readily available on the market were methyltestosterone, testosterone propionate and aqueous testosterone (testosterone suspension).

Testosterone propionate was the first acceptable testosterone ester and thus has been available as a therapeutic agent for decades. Testosterone propionate is a modified form of testosterone in which a carboxylate (propionic acid) has been attached to the 17- β hydroxyl group. The esterified form of testosterone is less polar than free testosterone and is absorbed more slowly from the injection area. Once in the bloodstream, the ester is removed, resulting in free (active) testosterone. The esterified form of testosterone was designed to extend the window for therapeutic efficacy after administration, allowing for a less frequent injection regimen than the free (unesterified) steroid injection. Testosterone propionate is usually injected daily or every other day, with a half-life of about two days.

Basic Information Form:

Name	99% Testosterone Propionate Raw Powder Steroids For Erectile Dysfunction
Cas	57-85-2
Assay	99%
Outlook	White powder
MF	C ₂₈ H ₃₈ O ₃
Shelf Life	2 years
Attention Terms	-20-4
