

C26H40O3 Bodybuilding Raw Powder Testosterone Enanthate CAS #315-37-

7

Our Product Introduction

Basic Information

- Place of Origin: China
- Brand Name: Hongbaiyi
- Certification: COA, HPLC MR
- Model Number: HBY-Testosterone
- Minimum Order Quantity: 1KG
- Price: Negotiable
- Packaging Details: Aluminum Bag or 25KG/Febr Drum
- Delivery Time: 3-5 work days after your payment
- Payment Terms: , Western Union, T/T
- Supply Ability: 4000kg/Month

Product Specification

- Product: Testosterone Enanthate
- Other Name: Test Enanthate
- Apperance: White Powder
- Cas No: 315-37-7
- MF: C26H40O3
- MW: 400.6
- Purity: 99%min
- MOQ: 1KG
- Highlight: C26H40O3 Testosterone Powder,
Enanthate Test Testosterone Powder ,
CAS 315-37-7 bodybuilding powder

Product Description

What is C26H40O3 Bodybuilding Raw Powder Testosterone Enanthate CAS #315-37-7?

Brief Introduction:

Testosterone Enanthate is a long-acting injection of testosterone. After deep intramuscular injection, entanate continues to release testosterone into the bloodstream for about 2 to 3 weeks. In order to maintain normal physiological levels of testosterone during androgen replacement therapy (TRT), injections of TESTOSTERONE heptanoate are usually required at least once every two weeks. In medical practice, most doctors prefer weekly injections. Like all testosterone injections, Testosterone Enanthate is favored by athletes for its ability to promote strength and growth of muscle mass.

The Enanthoic acid has been attached to the 17- β hydroxyl group. The esterified form of testosterone is less polar than free testosterone and is absorbed more slowly from the injection area. Once in the blood, the ester is removed, resulting in free (active) testosterone. The esterified form of testosterone is designed to extend the window for therapeutic effect after administration, and the esterified steroid product can be injected less frequently than the free (unesterified) steroid.

Basic Information form:

Product Name	C26H40O3 Bodybuilding Raw Powder Testosterone Enanthate CAS #315-37-7
Cas No.	315-37-7
Assay	99%
Appearance	White powder
MF	C26H40O3
Molecular Weight	400.6
Melting point	34 ~ 39°

**Application:**

Testosterone Enanthate is best suitable for muscle builders and sportsmen looking to gain the advantages of efficiency improving medications without the severe adverse reactions.

Testosterone enanthate is one of the main forms of testosterone prescribed in the United States. It is a slow-acting ester with a release time between 8-10 days. Testosterone enanthate is typically injected anywhere between once every week to once every three weeks.

Testosterone propionate is a fast-acting ester with a release time of 3-4 days. To keep blood levels from fluctuating greatly, propionate is usually injected between one to three times a week.

Test Enanthate is the most popular form of testosterone prescribed everywhere in the world except for the United States, where the very similar Testosterone Cypionate is typically preferred.

Testosterone Enanthate has a release time of between 8-10 days. It is typically injected once every one to three weeks, though some users opt for a twice a week frequency as well.

Function:

For Man

Applied to sexual inadequacy, sex organ dysplasia, infertility, cryptorchidism and infertility.

For Woman

Functional uterine bleeding

Climacteric syndrome

Breast cancer

Genital cancer

Liver cirrhosis

Aplastic anemia

Osteoporosis

Other wasting disease.
