Brief Introduction:

Testosterone Enanthate can be applied to male sexual inadequacy, sex organ dysplasia, infertility, cryptorchidism and infertility. Testosterone Enanthate Can also be used for female functional uterine bleeding, climacteric syndrome, breast cancer and genital cancer; Liver cirrhosis, aplastic anemia, osteoporosis and other wasting disease.

Testosterone enanthate exhibits a strong androgenic effect and good anabolic characteristics as well. Combined with other steroid compounds, Primoteston Testosterone Enantate is the most common stack used in the bodybuilding community, and will give great results in almost every case.

Testosterone Enanthate is one of the most popular form of testosterone prescribed everywhere in the world. Testosterone Enanthate steroids are very concentrated forms of hormonal substance that is why it can boost the levels of testosterone in the body very quickly. Athletes take exogenous testosterone to increase muscle strength and size.

Results indicated that weekly injections of the hormone decreased waist size and body weight. Supplement use also improved the men's sexual performance. The treatment was considered safe, as no malignancies were observed during biopsies.

**Application:**

In the medical field:

Testosterone heptanate is most commonly used clinically to maintain normal levels of testosterone required by adult men with low androgen levels. Low androgen levels are a sign of low libido, weak muscle mass and lethargy. Testosterone heptanate is also used to treat testicular dysplasia and delayed puberty in adolescent males.
