Brief Introduction:

Cefotaxime Sodium is the third generation of semi-synthetic cephalosporin, and its effect on gram-positive bacteria is not as good as cefazolin. Enterococcus is resistant to this product, and has no effect on penicillin-resistant pneumococcus, and has strong bactericidal activity on gram-negative bacteria. The antibacterial effect of escherichia coli, influenza bacillus, pneumonia bacillus, Proteus mirabilis, salmonella is stronger than cefoperazone, weak or resistant to bacteroides fragilis, aeruginomonas, Enterobacter cloacae are not sensitive to this product.

Cefotaxime is widely distributed in various tissues and body fluids throughout the body. The concentration of drugs in normal cerebrospinal fluid is very low; Effective concentration can be achieved in the cerebrospinal fluid of patients with meningitis after application of this product. Bronchial secretions, middle ear discharge, pleural effusion, empyema and pus, ascites, gallbladder wall, bile, bone tissue can also reach effective concentration: this product can enter fetal blood circulation through the placental barrier, a small amount can enter milk.
