

Veterinary Medicine White Raw Powder Neomycin Sulphate for Conjunctivitis

Our Product Introduction

Basic Information

- Place of Origin: China
- Brand Name: Hongbaiyi
- Certification: COA, HPLC MR
- Model Number: HBY-Neomycin Sulfate
- Minimum Order Quantity: 1KG
- Price: Negotiable
- Packaging Details: Aluminum Bag or 25KG/Fibre Drum
- Delivery Time: 3-5 work days after your payment
- Payment Terms: Western Union, T/T,
- Supply Ability: 4000kg/Month

Product Specification

- Name: Veterinary Medicine White Raw Powder Neomycin Sulphate For Conjunctivitis
- CAS: 1405-10-3
- MW: 614.644
- MF: C23H48N6O17S
- Appearance: White Powder
- MOQ: 1kg
- Shelf Life: 2 YEARS
- Storage: 2~8 Centigrade

Product Description

What is Veterinary Medicine White Raw Powder Neomycin Sulphate for Conjunctivitis?

Basic Information:

Product Name	Veterinary Medicine White Raw Powder Neomycin Sulphate for Conjunctivitis
CAS	1405-10-3
Purity	99%min
MF	C ₂₃ H ₄₈ N ₆ O ₁₇ S
MW	614.644
Storage	Keep in a cool, dry, dark location
Deliver Time	Within 24 Hours After Receiving The Payment
MOQ	1KG

Brief Introduction:

Neomycin is an antibiotic, and streptomycin, kanamycin, gentamicin belong to aminoglycoside antibiotics. It's produced by *Streptomyces freundi*; Effective against gram-positive and gram-negative bacteria. Neomycin was completely cross-resistant to kanamycin and partially cross-resistant to streptomycin.

See streptomycin sulfate. Pharmacokinetics is rarely absorbed by oral administration, only about 3% by intact intestinal mucosa, but a comparable amount by ulcerated or exfoliated or inflamed mucosa. Most of it passes unaltered in the stool. Neomycin has strong antibacterial effect on *Mycobacterium tuberculosis*, and its minimum inhibitory concentration is generally 0.5mg/ mL. Most non-tuberculous mycobacteria are resistant to the drug. Neomycin also has antibacterial effect on many gram-negative bacteria, such as *Escherichia coli*, *Klebsiella*, *Proteus*, *Enterobacter*, *Salmonella*, *Shigella*, *Brucella*, *Pasteurella*, etc. *Neisseria meningitidis* and *Neisseria gonorrhoeae* are also sensitive to this product.

Neomycin had poor effect on staphylococcus and other gram-positive cocci, while streptococcus, *Pseudomonas aeruginosa* and anaerobic bacteria were resistant to neomycin. Neomycin mainly binds to the bacterial ribosome 30S subunit and inhibits the synthesis of bacterial proteins. Bacteria are easily resistant to neomycin after contact. Neomycin combined with other antimicrobial or antituberculous agents can reduce or delay the development of drug resistance. The product is white or quasi-white powder.
