

HPLC Antibiotics Powder Animal Feeding 99% Avilamycin Poultry

Our Product Introduction

Basic Information

- Place of Origin: China
- Brand Name: Hongbaiyi
- Certification: COA, HPLC MR
- Model Number: HBY-Avilamycin
- Minimum Order Quantity: 1KG
- Price: Negotiable
- Packaging Details: Aluminum Bag or 25KG/Fibre Drum
- Delivery Time: 3-5 work days after your payment
- Payment Terms: Western Union, T/T,
- Supply Ability: 4000kg/Month

Product Specification

- Product Name: 99%HPLC Animal Feeding Veterinary Grade White Raw Powder Avilamycin
- CAS No: 11051-71-1
- Outlook: White Crystalline Powder
- Assay: 99%Min
- Shelf Life: 2 YEARS
- Storage Temperature: Preserve In Tight, Light-resistant Containers In A Cool Place
- Molecular Formula: $C_{61}H_{88}Cl_2O_{32}$
- MOQ: 1kg
- Highlight: **99% HPLC Antibiotics Powder, Animal Feeding 99% Antibiotics Powder, 99% avilamycin poultry**

Product Description

What is 99%HPLC Animal Feeding Veterinary Grade White Raw Powder Avilamycin?

Basic Information:

Product Name	99%HPLC Animal Feeding Veterinary Grade White Raw Powder Avilamycin
CAS	11051-71-1
Purity	99%min
MF	C ₆₁ H ₈₈ Cl ₂ O ₃₂
Storage	Preserve in tight, light-resistant containers in a cool place
Deliver Time	Within 24 Hours After Receiving The Payment
MOQ	1KG

Brief Introduction:

Avilamycin is an orthosomycin antibiotic complex produced by the fermentation of *Streptomyces viridochromogenes*. Orthosomycin antibiotics are divided into two groups: those that contain an aminocyclitol residue and those that are esters of dichlorisoevernic acid. Avilamycin falls into the latter group as do the evernimicins. Avilamycin is primarily active against gram-positive bacteria. The fermentation product comprises one major factor, avilamycin A, and 15 minor factors: avilamycin A', B, C, D1, D2, E, F, G, H, I, J, K, L, M and N.

Avilamycin is intended for use as a veterinary medicine in chickens, turkeys, pigs and rabbits to control bacterial enteric infections. It is intended to be administered to chickens, turkeys and pigs orally at a dose of 100 mg/kg feed for 21 days. In rabbits it is intended to be administered orally at a dose of 80 mg/kg feed for 28 days. Avilamycin was previously authorised as a feed additive for growth promotion in accordance with Council Directive 70/524/EEC; the substance was incorporated in pig feedstuffs at a concentration of 20 mg/kg feed for animals up to 6 months of age and 40 mg/kg feed for animals up to 4 months of age. In addition it was incorporated into chicken and turkey feedstuffs at a concentration of 10 mg/kg feed. The use of the substance as additive was discontinued in the EU from 1 January 2006.
