Product Description

What is CAS 139755-83-2 Male Sexual Enhancement Powder Tadalafil Citrate?

Tadalafil is used to treat erectile dysfunction (impotence; inability to get or keep an erection) in men. Tadalafil is used to improve the ability to exercise in adults with pulmonary arterial hypertension (PAH; high blood pressure in the vessels carrying blood to the lungs, causing shortness of breath, dizziness, and tiredness). Children should not usually take Tadalafil, but in some cases, a doctor may decide that Tadalafil is the best medication to treat a child's condition. Tadalafil is in a class of medications called phosphodiesterase (PDE) inhibitors. Tadalafil treats erectile dysfunction by increasing blood flow to the penis during sexual stimulation. This increased blood flow can cause an erection. Tadalafil treats PAH by relaxing the blood vessels in the lungs to allow blood to flow easily.
