Brief Introduction:

BPC-157 has a strong anti-inflammatory activity in both acute and chronic inflammation models. In fact, preliminary results in clinical trials suggest that BPC-157 may become an important therapeutic tool for the treatment of inflammatory bowel disease. BPC-157 was shown to accelerate wound healing and to have a marked angiogenic effect.

In addition, it significantly facilitates the healing of bone fracture in rats. This peptide also exhibits an osteogenic effect significantly improving the healing of segmental bone defect. BPC-157 accelerates the healing of transected rat Achilles tendon and transected rat quadriceps muscle.

**Application:**

1. For Medical Treatment

Repair pancreatic, liver damage, endothelium, heart damage and joints.

2. For Fitness Industry

Help bodybuilders or athletes build muscle

Function:

1. BPC157 acts in a glucose-dependent manner, meaning it will stimulate insulin secretion only when blood glucose levels are higher than normal, preventing "overshoot". Consequently, it shows negligible risk of hypoglycemia.
2. BPC157 has the potential for inhibiting apoptosis and stimulating regeneration of beta cells (seen in animal studies).
3. BPC157 decreases appetite and inhibits body weight gain, as shown in a head-to-head study versus glimepiride.
4. BPC157 lowers blood triglyceride levels.
