

Pharmaceutical Intermediate 99% Purity Raw Powder Peptide Oxytocin

Our Product Introduction

Basic Information

- Place of Origin: China
- Brand Name: Hongbaiyi
- Certification: COA, HPLC MR
- Model Number: HBY-Oxytocin
- Minimum Order Quantity: 1 BOX
- Price: Negotiable
- Packaging Details: 2mg/vial, 10vials/box
- Delivery Time: 3-5 work days after your payment
- Payment Terms: , Western Union, T/T
- Supply Ability: 4000kg/Month

Product Specification

- Name: Pharmaceutical Intermediate 99% Purity Raw Powder Peptide Oxytocin
- Grade: Pharmaceutical Grade
- Color: White
- CAS: 50-56-6
- Assay: HPLC 99%
- Specification: 2mg/vial, 10vials/box
- Storage: 2~8 Centigrade
- Shelf Life: 2 Years

Product Description

What is Pharmaceutical Intermediate 99% Purity Raw Powder Peptide Oxytocin?

Basic Information Form:

Product Name	Pharmaceutical Intermediate 99% Purity Raw Powder Peptide Oxytocin
Cas No	50-56-6
Grade	Pharmaceutical Grade
Assay	99%
Melting Point	192-194
Appearance	White powder
Application	Bodybuilding
Shelf Life	2 years
Condition	2~8 centigrade

Brief Introduction:

Oxytocin is a hormone produced by the hypothalamus and secreted by the pituitary gland. This important hormone plays a crucial role in the childbirth process.

In women, oxytocin is responsible for signaling contractions of the womb during labor. The hormone stimulates the uterine muscles to contract, so labor begins. It also increases the production of prostaglandins, which move labor along and increases the contractions even more.

For men, oxytocin function is less important, but it does have a role to play in moving sperm. It also appears to affect the production of testosterone in the testes.

Studies of oxytocin also have found that it is an important chemical messenger that controls some human behaviors and social interaction. It is oxytocin that triggers the bond between a mother and an infant, and it may also play a role in recognition, sexual arousal, trust, and anxiety. Some research shows that the hormone may affect addiction and stress as well.

Product Image:

Application:

For medicine:

For pelvic stenosis, the history of uterine surgery (including cesarean section), hyperactive labor, obstruction of birth canal, placental abruption, and severe pregnancy poisoning.

Uterine bleeding caused by contractions caused by uterine contractions, such as induced labor, oxytocin, postpartum, and miscarriage. A nasal drop may induce a lactation.

For men, it also appears to affect the production of testosterone in the testes.

Function:

Oxytocin is a neurohypophysial mammalian hormone that primarily acts as a neuromodulator in your brain. It is a generic medication that induces labor in females with Rh problems preeclampsia, diabetes or in the fetus or the mother best interest. As a medication, it is used to cause contraction of the uterus in order to start labor or increase the speed of labor, and to stop bleeding following delivery. For this purpose, it is given either by injection into a muscle or into a vein. Oxytocin is normally produced in the hypothalamus. It plays a role in social bonding, sexual reproduction in both sexes and during or after childbirth. Oxytocin is released into the bloodstream as a hormone in response to stretching of the cervix and uterus during labor and with stimulation of the nipples from breastfeeding. It helps with birth, bonding with the baby and milk production.

Oxytocin (Oxt) is a mammalian neurohypophysial hormone. Produced by the hypothalamus and stored and secreted by the posterior pituitary gland, oxytocin acts primarily as a neuromodulator in the brain.

Oxytocin plays an important role in the neuroanatomy of intimacy, specifically in sexual reproduction of both sexes, in particular during and after childbirth; its name, meaning "swift childbirth", comes from Greek, oksys "swift" and , tokos "birth." It is released in large amounts after distension of the cervix and uterus during labor, facilitating birth, maternal bonding, and, after stimulation of the nipples, lactation. Both childbirth and milk ejection result from positive feedback mechanisms.

Package and Shipping of Pharmaceutical Intermediate 99% Purity Raw Powder Peptide Oxytocin

Package: 2mg/vial, 10vials/box

Shipping: With 3-5 days after your payment

FAQ of Pharmaceutical Intermediate 99% Purity Raw Powder Peptide Oxytocin

Q1: Do you Accept Sample Order?

A: Yes. The smallest order we accept is one box.

Q2: Do you accept VISA business credit card?

A: Yes. VISA business credit card is in our payment .

Q3: Is there any discount?

A: Yes, if you want to purchase larger quantity, we can offer better price for you.

Q4: How long does it take to me if I order?

A: About 3-5 days upon receipt of payment.

Q5: What kind of transportation do you have?

A: We have many ways of transportations, eg: Air, Sea, Special Lines, TNT, FEDEX, EMS, ect.
