1. ACE- 031 is an investigational protein therapeutic that builds muscle and increases strength by inhibiting molecules that bind to and signal through a cell surface receptor

called Activin Receptor Type IIB (ActRIIB).ACE- 031 is a recombinant fusion protein that is produced by joining a portion of the human ActRIIB receptor to a portion of a human antibody.

2. ACE- 031 is intended for research purpose only. ACE- 031 should not be used for human consumption,diagnostic, therapeutic procedures, agricultural and veterinary purposes.ACE- 031 is a soluble fusion protein that has been shown to increase muscle mass and strength in research studies.

3. ACE- 031 is being studied as a treatment for metabolic diseases, renal neoplasms of childhood, cardiovascular anomalies, age-related muscle loss, and cancer treatment related muscle loss and neuromuscular diseases. ACE- 031 is a biologic therapeutic, based on activin receptor type IIB (ActRIIB).

ACE031 is a biologic therapeutic, based on activin receptor type IIB (ActRIIB). The molecule inhibits signaling via the ActRIIB receptor binding and increase muscle mass and strength. ACE031 is a recombinant fusion protein that is artificially synthesized by fusion of standard antibody and a portion of ActRIIB receptor. The recombinant fusion protein eliminates myostatin and other biomolecules that limit muscle strength or growth.
