Brief Introduction:

This is a brand new peptide found in Belgian blue cattle. This grass-market animal is able to grow pure muscle like crazy in its natural state because it has this substance in its body. Ingesting this peptide, the muscles are freed from myostatin for a short time. The FST344 features:

1. Muscle mass is at least twice that of peers;
2. very low fat;
3. There will be no problems with visceral hypertrophy.

Because FST334 is a hormone that only targets skeletal muscle, it binds and binds Myostatin to Myostatin, which does not allow it to play its role. Without inhibition, muscles will grow freely and frantically.
