Brief Introduction:

Other name: Mod GRF, GHRH, CJC-1295 without DAC, MOD GRF 1-29, Modified GRF 1-29

CJC-1295 is a long acting Growth Releasing Hormone, which causes the anterior pituitary to release more growth. GHRH is released in pulses in the body, which alternate with corresponding pulses of somatostatin (growth-hormone inhibiting-hormone). Clinical Research was first conducted for CJC-1295 during the mid-2000s. The objective of the peptide was to treat visceral fat deposits in obese AIDS patients, as increased levels of exogenous GH are presumed to increase lipolysis (fat loss). The clinical research was ultimately successful for most research subjects.

CJC-1295 has shown some amazing results as a growth releasing hormone (GHRH) analog. Not only has CJC-1295 shown the ability to increase growth and GH secretion and its benefits, but it has been able to do so in very large amounts. Recent research studies have shown that CJC - 1295 stimulates GH and GH secretion, and will keep a steady increase of GH and GH secretion with no increase in prolactin, leading to intense fat loss, and increases protein synthesis.

Function:

1. Boost protein synthesis
2. Increased growth of muscle tissue
3. Helps injury recovery times
4. Reduce body fat
5. Boost immune system
6. Bone density
7. Cellular repair (skin and organs)
