Brief Introduction:

Magnesium deficiency afflicts a large percentage of the human population; American women in particular only consume 68% of the recommended amount of magnesium per day. This is a problem because magnesium is a key nutrient for ensuring that the brain operates at maximum capacity.

Thankfully, Magnesium L-Threonate (MgT) is a new form of the basic element magnesium, researchers at MIT discovered that Magnesium L-Threonate is able to maximize the amount of magnesium your brain can absorb. Not only that, researchers noted Magnesium L-Threonate improved both short term and long term memory.
