Brief Introduction:

In Europe alpha-GPC is a prescription medication for the treatment of Alzheimer's disease. It is available in two forms; one is taken by mouth, and the other is given as a shot. In the United States alpha-GPC is only available as a dietary supplement, mostly in products promoted to improve memory. Other uses for alpha-GPC include treatment of various kinds of dementia, stroke, and "ministroke" (transient ischemic attack, TIA). Alpha-GPC is also used for improving memory, thinking skills, and learning.

Alpha GPC seems to increase a chemical in the brain called acetylcholine. This brain chemical is important for memory and learning functions.
