Application:

Magnesium Taurine is a condition of the human body essential amino acids. Research showed that taurine could strengthen the function of cardiovascular system, help to improve the iron deficiency anemia, can reduce the formation of free radicals, prevent cell autolysis, protect the early and late ischemia-reperfusion injury by skeletal muscle dysfunction secondary, at the same time has good antipyretic analgesic efficacy. The human body in the condition of disease and stress may cause serious lack of taurine in the body, taurine as the main ingredients of pharmaceutical preparations or nutritional additives widely in clinical demand. Magnesium ions (magnesium 2 +) in the body of nearly 300 kinds of enzymatic process, studies its for heart failure, arrhythmia, ventricular premature beat, ventricular tachycardia, reverse the sex on the room tachycardia ventricular tachycardia, room type, room tachycardia and atrial fibrillation, etc have certain curative effect, can participate in calcium phosphorus metabolism, maintain the neural induction. Taurine with magnesium applications make against ischemia or notes arrhythmia and suppress Francisco Ca²⁺ + internal flow, prevent the "enhanced calcium overload". And taurine can prolong guinea pig papillary muscle action potential schedule and effective refractory period, magnesium has the same electrical physiological effect. After it made into magnesium compound taurine, antihypertensive, anti-arrhythmic, preeclampsia and child disease resistance, and so on, can be used as a kind of feasible new drugs, food additives and metal elements supplement.

Function:

- 1: Improving magnesium levels in the body
- 2: Improving cognitive performance
