#### Brief Introduction:

PRL-8-53 is an experimental compound which many believe to be one of the most effective memory boosters available. Its full name is methyl 3-(2-(benzyl(methyl)amino)ethyl)benzoate.

Researchers found that oral supplementation of PRL-8-53 was able to improve avoidance learning in rats. One human study has also been done on PRL-8-53. Each participant ingested a placebo and PRL-8-53, at separate times, in a double blind crossover study. Participants then took a memory test, consisting of twelve monosyllabic words in a particular order. The test was conducted three times, immediately after supplementation, one day after supplementation, and four days after supplementation.
