Brief Introduction:

Anadrol, also known as the A50, A bomb, was originally developed to treat anemia and wasting caused by various diseases. This shows that it is an effective drug for weight gain, appetite, strength, and red blood cell count. Like most other anabolic steroids, Convalescent has side effects. It inhibits its own hormones, negatively affects lipid profile, causes water retention, and is notorious for causing headaches and severe hepatotoxicity. Paradoxically, while Syntex, its original manufacturer, claimed that the convolker stimulated weight gain by increasing appetite, in large doses it suppressed appetite.
