

Sarms Medical Raw Material Trenbolone Enanthate For Protein Synthesis

Our Product Introduction

Basic Information

- Place of Origin: China
- Brand Name: Hongbaiyi
- Certification: COA, HPLC MR
- Model Number: HBY- Trenbolone Enanthate
- Minimum Order Quantity: 1kg
- Price: Negotiable
- Packaging Details: Aluminum Bag or 25kg/Fibre Drum
- Delivery Time: 3-5 work days after your payment
- Payment Terms: , Western Union, T/T
- Supply Ability: 4000kg/Month

Product Specification

- Name: Medical Sarms White Raw Powder
Trenbolone Enanthate For Protein Synthesis
- Other Name: Cardarine
- Appearance: White Crystal Powder
- Purity: 99% Min
- Molecular Formula: $C_{21}H_{32}N_2O$
- Molecular Weight: 328.492
- CAS: 10418-03-8
- MOQ: 1kg
- Highlight: **Sarms Medical Raw Material,
Trenbolone Enanthate Medical Raw Material,
CAS 10418-03-8 Medical Raw Material**

Product Description

What is Medical Sarms White Raw Powder Trenbolone Enanthate For Protein Synthesis ?

Basic Information form:

Product Name	Medical Sarms White Raw Powder Trenbolone Enanthate For Protein Synthesis
Cas No.	10540-29-1
Assay	99%
Appearance	White powder
MF	$C_{21}H_{32}N_2O$
Shelf Life	2 years
MOQ	1kg

Brief Introduction:

Trenbolone Enanthate, often referred to domestically as Tren-E, is an extremely powerful anabolic steroid. It can be used interchangeably with Trenbolone Hexahydrobenzylcarbonate. Considering the use of heptanate, the drug will show nearly the same pharmacokinetics as testosterone heptanate, providing peak release of its steroid within the first few days after injection and then decreasing levels for approximately 2 weeks. The base steroid here, bublon, is a derivative of Nalone, with powerful anabolic and androgenic properties. On a mg basis, it is far more potent than basic solid alcohols such as testosterone. Nor can it be converted to estrogen, but it has significant progesterone activity.

Application:

[4] Increased igF-1 secretion:

Insulin-like growth factor-1 (IGF-1) is a potent peptide protein hormone, mainly produced by the liver. Insulin-like growth factor (IGF-1) plays an indispensable role in regulation with growth hormone HGH (HGH), and has a strong anabolism effect. IGF-1 actually affects almost every cell in the human body, including muscle tissue, ligaments and tendons, cartilage, bone, central nervous system, and even our lungs.

[5] The inhibitory effect of glucocorticoids:

Glucocorticoids are essential for our health, but only at low levels. High levels of glucocorticoids cause our muscles to atrophy and promote fat production, and while they are important for our immune system, high levels can wreak havoc on the body. Strenuous workouts at the gym, as well as dieting, can greatly increase levels of cortisol, the main and best-known of the glucocorticoids. Heptanohydrone has a strong inhibitory effect on glucocorticoid and will ensure that the glucocorticoid level in human body is kept at a minimum, thus ensuring that the body maintains a strong anabolic environment.

Package and Shipping of Medical Sarms White Raw Powder Trenbolone Enanthate For Protein Synthesis

Package:

Under 25kg: inner: A PE bag in aluminum foil bag; Outside: carton

Over 25kg: inner: Double PE bags; Outside: 25kg/ fibre drum

**Shipping:**

With 3-5 days after your payment

FAQ of Medical Sarms White Raw Powder Trenbolone Enanthate For Protein Synthesis

Q1: Do you Accept Sample Order?

A: Yes. The smallest order we accept is 1kg.

Q2: Do you accept VISA business credit card?

A: Yes. VISA business credit card is in our payment .

Q3: Is there any discount?

A: Yes, if you want to purchase larger quantity, we can offer a better price for you.

Q4: How long does it take to me if I order?

A: About 3-5 days upon receipt of payment.

Q5: What kind of transportation do you have?

A: We have many ways of transportations, eg: Air, Sea, Special Lines, TNT, FEDEX, EMS, ect.
