Brief Introduction of 99% raw powder cas 66004-57-7 bodybuilding peptide hgh fragment 5mg

Hgh fragment 176/191 is a fat loss peptide derived from the GH molecule, which directly initiates lipolysis and inhibits lipogenesis, but in order to better understand this peptide, it is imperative to have at least a rudimentary understanding of its parent hormone .

GH is a polypeptide which contains an amino acid sequence that is 191 amino acids in length. Hgh fragment 176/191 was developed by isolating and modifying the specific portion of the GH molecule responsible for the hormone's lipolytic and anti-lipogenic effects.

The portion of the molecule responsible for these effects is amino acids 176/191. In every sense, Frag should primarily be considered a fat loss peptide which performs these functions through the same pathways as traditional GH, but without exposing the user to the potentially undesirable side effects which may present themselves during GH administration.

Application of 99% raw powder cas 66004-57-7 bodybuilding peptide hgh fragment 5mg
