Product Description

What is 99% Purity Sarms Powder GW501516 for Obesity Treating CAS 317318-70-0?

GW'501516 (GSK-516) is that acts as a PPAR δ modulator. GW 501516 activates and stimulates glucose uptake in skeletal muscle tissue, and GW 501516 has been demonstrated to reverse metabolic abnormalities in obese men with pre-diabetic metabolic syndrome, most likely by stimulating fatty acid oxidation. It has been proposed as a potential treatment for obesity and related conditions, especially when used in conjunction with a synergistic compound AICAR, as the combination has been shown to significantly increase exercise endurance in animal studies.

Function:

1. Endurance: It is recommended stacking cardarine with AICAR and/or Equipose. This is the ultimate endurance stack that will turn you into a race horse.
2. Anabolic stack: If you run moderate doses of anabolic, or you run any harsh compound, then cardarine will aid in not only your lipids, but also with your ability to 'catch your wind.' Therefore, cardarine is a perfect stack, which makes many athletes lose their breath fast.
3. During PCT (post cycle therapy) or bridge: Since cardarine is not hormonal, it is in no way suppressive. Hence, you should not be scared of using it to keep fat off and improve your workouts between cycles during your bridge and PCT.
4. SARMS triple stack: If you want aato recomp, cardarine stacks beautifully with S4 and MK-2866.

Dosage:

The half life of cardarine is 20-24 hours. This means that once a day dose is totally fine. Some athletes like to use all the 20 mg an hour before their workout session, and others will split the dose in half in the AM and PM.
