GHRP 2 Growth Hormone Releasing Peptide is most commonly used for the same purpose as GH, but can be chosen for GHRP6, cost advantages of GH, or an injection that an individual would prefer to stimulate their production of GH

ghrp 2 Growth Hormone Releasing Peptide is widely used to increase the production of natural GH in the body. Increased GHH has benefits for anabolism, fat loss, recovery and general health, and may have an anti-aging effect. GHRP6 will show even greater benefits when used as part of a long-term anti-aging program (Ho Rmone replacement therapy) or in combination with other drugs used to improve performance. For athletes or bodybuilders, GHRP6 is usually used in conjunction with Mod GRF 1-29 (CJC-1295 without DAC) in lieu of the use of GH.
