Brief Introduction of Melanotan ii Buy

Melanotan 2 (CAS NO. 121062-08-6) was first synthesized at the University of Arizona. Researchers decided to find a more potent and stable alternative, one that would be more practical to defenses against skin cancer.

Melanotan 2 acts as a non-selective agonist of the melanocortin receptors. The melanogenesis produced by melanotan 2 is caused by activation of the MC1 receptor, whereas its sexual effects are thought to be related to its ability to activate the MC4 receptor (though the MC3 is thought to possibly also be involved).

Mt2 designed to stimulate the body's tanning response with minimal exposure to sunlight. This can be a wonderful way for those with fair to very fair skin to get tanned without having to spend weeks in the sun and going through the burn and heal process.

By using mt2, users experience quicker tanning and faster healing to damaged skin cells than would otherwise be possible. Because of this, Melanotan II is especially suited to those whose skin is pale; those who are at greatest risk of developing skin cancer.
