Brief Introduction of Hexarelin 5mg

Hexarelin (also known as Examorelin) is a synthetic analog of ghrelin and shows a high degree of similarity to GHRP-6. The only difference between hexarelin and GHRP-6 is the inclusion of two methyl groups in the structure of GHRP-6. Like other ghrelin analogs, this peptide remains active both orally and sublingually and displays high selectivity in its mode of action. It has been extensively studied because of its impact on cardiac cell survival after ischemia and nutrient deprivation.
