Thymosin-beta4, better known as TB-500, is an extremely interesting peptide. Due to its extremely fast general and wound healing effect, it is a kind of healing booster for athletes after an injury to be back on the ball as soon as possible, which can be a huge advantage especially in strength training after surgery or the like.

TB-500 is a peptide that can be used to promote healing, increase the range of motion in the event of injury, or relieve pain in the event of injury by reducing inflammation. Until now, the use in humans is not widespread and is currently limited to people who like to experiment. The use in the field of equestrian sports, however, is very common because it is a non-prescription animal drug. It is believed that it is also used by professional athletes, such as footballers, so that they are as soon as possible ready for use again.
