High Purity Bodybuilding Peptide gh Fragment For Fat Loss

Basic Information Form Of Peptide gh Fragment

Product Name	Peptide gh Fragment
Cas No.	863288-34
Molecular Formula	C ₇₈ H ₁₂₃ N ₂₃ O ₂₃ S ₂
Appearance	White powder
Peptide Purity	99%
Molecular Weight	1817.1
Shelf Life	2 years
Storage	2-8

What is Peptide gh Fragment

Peptides are biological molecules consisting of two or more amino acids linked together by chemical bonds. They are an essential part of the human body, playing a role in everything from cell communication to metabolism. One type of synthetic peptide is the gh. GH is a 191-amino acid peptide that is produced naturally in the pituitary gland. A fragment of GH, known as GH 176-191, has become popular among bodybuilders and athletes for its ability to promote fat loss and muscle growth.

GH Fragment 176 191 is a peptide that consists of amino acids 176-191. It is a part of the larger GH molecule.

GH is produced by the pituitary gland and plays a vital role in growth and development. The fragment 176-191 is thought to be responsible for the fat-burning effects of GH. In animal studies, it has been shown to decrease body fat and increase lean muscle mass. It also appears to be safe and well-tolerated in humans. Overall, GH Fragment 176 191 appears to be a promising supplement for those looking to lose body fat and build muscle mass.
