

High Purity Bodybuilding Igf1 Lr3 Peptide For Add Muscle

Our Product Introduction

for more products please visit us on peptide-powder.com

Basic Information

- Place of Origin: China
- Brand Name: Hongbaiyi
- Certification: COA, HPLC MR
- Model Number: HBY-Igf1 Lr3
- Minimum Order Quantity: 5box
- Price: US\$ 38-58/ box
- Packaging Details: 0.1mg/vial, 10vials/box
- Delivery Time: 3-5 work days after your payment
- Payment Terms: MoneyGram, Western Union, T/T
- Supply Ability: 4000kg/Month

Product Specification

- Name: Igf1 Lr3
- CAS: 946870-92-4
- Molecular Weight: 9117.6
- Molecular Formula: C400H625N111O115S9
- Other Names: Long R3-IGF-1; IGF-1 Long R3
- Specification: 0.1mg/vial, 10vials/box
- Appearance: White Powder
- Storage: 2-8
- Highlight: Bodybuilding Igf1 Lr3 Peptide, High Purity Igf1 Lr3 Peptide, Add Muscle Injectable Peptides

Product Description

High Purity Bodybuilding Igf1 Lr3 Peptide For Add Muscle

Basic Information Form Of Igf1 Lr3 Peptide

Product Name	Igf1 Lr3 peptide
Cas No.	946870-92-4
Molecular Formula	C400H625N111O115S9
Molecular Weight	9117.6
Appearance	White powder
Peptide Purity	99%
Shelf Life	2 years
Storage	2-8

What is Igf1 Lr3 Peptide

IGF-1 LR3 obstructs the movement of glucose into the body's cells. This facilitates fat burning and the use of fat in the body for the production of energy. IGF-1 LR3 has a life in the body for about 20-30 hours and therefore enhance the growth amount of muscle for a whole day.

IGF1-LR3 is a modified version of insulin-like growth factor-1. The full name of the peptide is insulin-like growth factor-1 long arginine 3. All IGF-1 derivatives play prominent roles in cell division, cell proliferation, and cell-to-cell communication. Though it has similar effects, IGF-1 LR3 does not adhere to IGF binding proteins as strongly as IGF-1. This results in IGF1-LR3 remaining in the bloodstream 120 times longer than IGF-1. IGF1-LR3 gains its prolonged half-life as a result of its structural changes. The peptide is created by adding 13 amino acids to the N-terminal end of IGF-1 and by converting the glutamic acid at position 3 of IGF-1 to an arginine residue.

IGR1-LR3 is a breakthrough peptide that has shown great results without many of the side effects or risks of other more commonly prescribed fat loss medications. IGF-1 LR3 inhibits the movement of glucose into the body's cells which facilitates fat burning and the use of fat in the body for the production of energy. Its effects last most of the day and have made it a preferred variant by a majority of patients and physicians. When IGF-1 LR3 is active in the body, it functions differently in different types of tissues. For instance, in muscle tissue, it makes the muscle more sensitive to insulin's effects, such as a reduction in fat storage.
