What is PT 141 Female Libido

PT-141 is the prior developmental code given name for Bremelanotide. This is a peptide originally developed as a sunless tanning agent. It is a melanocyte-stimulating hormone (MSH) that affects sexual arousal, aiding enhanced libido levels and penile erections. Unlike Viagra or Cialis, PT-141 is not a PDES inhibitor, and it does not target the vascular system. Instead, it acts on the nervous system via activation of neurons in the hypothalamus to increase sexual desire.

Does PT-141 Work for Women?

Another exciting feature of this medication is that it is effective for women as well. Many women suffer from hypoactive sexual desire disorder (HSDD). This is characterized by a lack or absence of sexual fantasies or desire for sexual activity in the absence of a diagnosed psychological disorder or a bad relationship. PT- 141 has proven to be effective for women. A 2016 study found that taking PT- 141 over 12 weeks increased the number of sexually satisfying events (SSE) in pre-menopausal women who suffered from hypoactive sexual arousal disorder (HSDD) and female sexual arousal disorder (FSAD). Participants also had an increase in their female sexual function index (FSFI) and orgasm score total with no adverse effects.
