#### What is PEG MGF For Sale

A variant of insulin-like growth factor (IGF), Mechano growth factor (MGF) is thought to be able to allow athletes and bodybuilders to recover faster and increase hypertrophy.

MGF is produced in the liver and travels into the bloodstream, however, it does break down within 5-7 minutes. Due to this, scientists have found a way to isolate it and modify it, by adding a compound. Doing so can increase the half-life to several days instead. Hence, now we have PEG-MGF (Pegylated Mechano Growth Factor).

#### What Does It Do?

Muscles heal and cells then grow and get bigger. In this phase, PEG MGF is used for muscle recovery. It binds to receptors and recovers the damaged muscle tissues. As well it signals satellite cells to grow as well. Therefore you get faster and larger growth. Basically, on top of the existing muscle growth, you are creating new muscle growth. This can be helpful, in theory, to bodybuilders, but also to age-related muscle loss issues and conditions.

The benefit of PEG MGF over the past variants of IGF, is that you can use it to get more out of it vs. just repairing and recovering from damaged muscle tissue. This is a unique ability to grow muscles in the area where it is desired.
