

CAS 158861-67-7 99% Purity Growth Hormone Releasing Peptide 2

Our Product Introduction

for more products please visit us on peptide-powder.com

Basic Information

- Place of Origin: China
- Brand Name: Hongbaiyi
- Certification: COA, HPLC MR
- Model Number: HBY-GHRP2
- Minimum Order Quantity: 5 box
- Price: US\$ 25-35 / box
- Packaging Details: 5mg/vial, 10vials/Box
- Delivery Time: 3~5 days, upon receipt of payment
- Payment Terms: T/T, Western Union, MoneyGram
- Supply Ability: 5000 boxes per month

Product Specification

- Product Name: Growth Hormone Releasing Peptide 2
- CAS No: 158861-67-7
- MW: 746.897
- MF: C42H50N8O5
- Appearance: White Powder
- Storage: 2~8 Centigrade
- Shelf Life: 2 Years, When Proper Storage
- MOQ: 5 Box
- Highlight: **99% Purity Growth Hormone Releasing Peptide, Body Building GHRP 2 Peptide, CAS 158861-67-7 Anti Aging Peptides**

Product Description

CAS No 158861-67-7 99% Purity Growth Hormone Releasing Peptide 2

Product Details Of Growth Hormone Releasing Peptide 2 :

Product Name	Growth Hormone Releasing Peptide 2
Appearance	White powder
Specification	5mg/vial, 10vials/Box
MF	C42H50N8O5
MW	746.897
Assay	99%
Test	HPLC
CAS	158861-67-7

What Is Growth Hormone Releasing Peptide 2?

Growth hormone-releasing peptide-2 (GHRP-2) is a synthetic chain of six amino acids that send a signal to your pituitary gland to release more GH. This process helps the human body stimulate the growth of cells, muscle mass, and healthy tissue. This treatment is prevalent among our older patients, as it can also boost libido and help slow the onset of deteriorating diseases such as Alzheimer's.

Every body is built differently, and some people have bodies that may naturally produce high levels of GH. By age 30, your GH levels drop to 20% of what they were during your youth. Beyond the age of 30, it continues to decline at a rate of 12 to 15%.

The best candidates for growth hormone-releasing peptide-2 are older men and women experiencing chronic fatigue, anxiety, or depression or showing indicative changes in their blood cholesterol. Your age is closely correlated with how much GH your body produces. As you grow older, your body starts to produce less and less.

Signs that you may have low GH levels include weight gain, increased body fat, and weak muscles that aren't as strong as they once were. Specific symptoms may also include feelings of isolation, reduce bone density, and a great sensitivity to heat and cold.
