Product Presentation Of Ipamorelin For Sale

WHAT DO PEPTIDES DO?

Peptides are protein chains that deliver instructions to cells and molecules by binding to their receptors. Ipamorelin belongs to class of peptides that cause your body to secrete its own natural growth hormone – they're called growth hormone secretagogues.

Our natural hormone and peptide levels begin to drop as we age, making it more difficult to lose weight and maintain muscle tone and bone density. Ipamorelin supplementation provides a much-needed anti-aging boost.

HOW DOES IPAMORELIN WORK?

Composed of 5 amino acids, Ipamorelin is a growth hormone secretagogue that stimulates the pituitary gland to release more growth hormone. Rather than simply adding synthetic growth hormone into your system, however, Dr. Cabrera's peptide therapy encourages your body's ipamorelin levels to rise naturally. That means more benefits with fewer side effects – like the increased appetite from release of the stress hormone cortisol, which other peptides can cause.

Ipamorelin helps your body burn fat and recover from workouts sooner. If you exercise, you'll lose even more fat at a quicker rate. Ipamorelin also has anti-aging properties, helping to improve your immune system and sleep cycle, while increasing your energy, bone density, and body composition.
