What Is ACE 031

The peptide ACE-031 is a protein therapeutic. It contains a recombinant fusion protein which is produced by connecting a part of the mice ActRIIB receptor to a part of mice antibody.

By reducing the off signal which halts muscle production, the muscles become stronger.

According to research, AGE-031 has the ability to disrupt the release of these ligands, allowing muscles to grow faster and larger. In numerous animal studies, ACE-031 effects have been proven to significantly increase muscle mass and muscle strength. It has also been shown to prevent muscle loss and neuromuscular disease.

While it is not approved for consumption, ACE-031 protein is consistently used in laboratory research in regards to the neuromuscular disease treatment and its ability to improve muscle mass. What is ACE 031?
