What Is Buy AOD 9604

In recent years, peptide supplements have been developed to meet a variety of health needs. One of them is peptide AOD 9604, a modified form of amino acids 176-191 that was originally used as an anti-obesity drug. Injecting this modified hormone fragment can stimulate the pituitary gland, which in turn can speed up metabolism and burn body fat. Therefore, it can improve the results of dietary restrictions and exercise.

Peptide AOD 9604 regulates how the body metabolizes fat. It does so by:

Stimulating lipolysis, or the breakdown of fats and lipids via the hydrolyzation of triglycerides into glycerol and fatty acids.
Inhibiting lipogenesis, the metabolic process that forms fat (even from nonfat foods), increasing the amount of triglycerides in the body.

AOD-9604, The Fragment is a modified form of amino acids 176-191 of the human (GH) polypeptide. Investigators at Monash University discovered that the fat-reducing effects of GH appear to be controlled by a small region near one end of the GH molecule. This region, which consists of amino acids 176-191, is less than 10% of the total size of the GH molecule and appears to have no effect on growth or insulin resistance.

AOD-9604 works by mimicking the way natural regulates fat metabolism but without the adverse effects on blood sugar or growth that is seen with unmodified GH. Like GH, the fragment 176-191 stimulates lipolysis (the breakdown or destruction of fat) and inhibits lipogenesis (the transformation of non-fat food materials into body fat) both in laboratory testing and in animals and humans.

AOD-9604 is a synthetic analog of the lipolytic domain of human GH. It is not a GHRH (growth hormone releasing hormone) like Modified GRF 1-29, and it is not a GHRP (growth hormone releasing peptide) like GHRP-2, or GHRP-6. AOD9604 actually acts on the reduction of excessive adipose tissues such as those in the abdominal area, increase in muscle mass, and enhances the lipid content of the body. It is also known as lipotropin and Tyr-hGH fragment, and is generally available these days as a transdermal cream or an injectable.

AOD-9604 is an analog of the GRF which signals the effects of GH. It is a 15-mer peptide residue of the C-terminus to which tyrosine is added at the N-terminal end. This synthetically produced hormone is very common to weightlifters and bodybuilders because of a number of physical benefits.
