

High Purity Injectable Peptide Lyophilized Powder Tesamorelin For Bodybuilding

Our Product Introduction

for more products please visit us on peptide-powder.com

Basic Information

- Place of Origin: China
- Brand Name: Hongbaiyi
- Certification: COA, HPLC MR
- Model Number: HBY-Tesamorelin
- Minimum Order Quantity: 5box
- Price: US\$ 55-62 / box
- Packaging Details: 2mg/vial, 10vials/box
- Delivery Time: 3-5 work days after your payment
- Payment Terms: , Western Union, T/T
- Supply Ability: 4000kg/Month

Product Specification

- Peptide Name: Tesamorelin
- Synonyms: Hex-hGRF, ThGRF(1-44), TH-9507, (Hexenoyl Trans-3)-hGRF(1-44)-NH₂
- CAS No.: 218949-48-5
- Appearance: White Lyophilized Powder
- Molecular Formula: C₂₂₁H₃₆₆N₇₂O₆₇S
- Molecular Weight: 5136
- Peptide Purity: >99%
- Shelf Life: 2 Years
- Highlight: **Injectable Peptide Lyophilized Powder ,
Tesamorelin For Bodybuilding,
Injectable Peptide Tesamorelin**

Product Description

High Purity Injectable Peptide Lyophilized Powder Tesamorelin For Bodybuilding

Basic Information Form of Tesamorelin

Name	Tesamorelin
Cas No.	218949-48-5
Molecular Formula	C221H366N72O67S
MW	5136
Peptide Purity	99%
Shelf Life	2 years
Appearance	White Lyophilized powder

Brief Introduction of Tesamorelin

Tesamorelin is a growth hormone-releasing hormone (GHRH) analog that has been shown to increase growth hormone and IGF-1 levels. It is an injectable peptide that generates greater natural production of HGH (Human Growth Hormone). It binds and stimulates human GHRH receptors with similar potency as our own natural GHRH. It has not been shown to significantly affect other pituitary hormones in the body.

TESAMORELIN RESEARCH:

Clinical trials have shown that tesamorelin significantly reduces abdominal fat with fewer side effects than human growth hormone itself, although abdominal fat may return after the Tesamorelin is discontinued (depending upon the individual).

Tesamorelin has been shown to reduce lipodystrophy in HIV-infected individuals as well as similarly reducing abdominal fat in Non-HIV-infected individuals.

According to one clinical study, 10.9 percent of patients who were given Tesamorelin experienced reductions in deep belly fat. These patients suffered from HIV. Reductions in trunk fat, waist size, and waist-to-hip ratios were recorded during the study. However, limbs and abdominal SC fat levels remained the same. During treatment, insulin-like growth factor 1 was boosted. However, glucose parameters were not altered. This drug didn't trigger negative side effects in most patients. However, results were temporary, as patients who were switched to a placebo lost their improvements. The study lasted six months in total. Overall, visceral fat levels decreased by eighteen percent.

Functions Of Tesamorelin Peptide

Tesamorelin Boosts Cognition in Elderly

Tesamorelin is a stabilized analogue of the growth hormone-releasing factor (GRF) that induces growth hormone (GH) in a specific and physiological manner. To date, clinical studies suggest that Tesamorelin reduces visceral fat in HIV-infected patients with abdominal lipohypertrophy as well as reducing abdominal fat in all individuals studied.

A peptide that increases growth hormone release improved several measures of cognitive function in cognitively normal and mildly impaired older individuals in a placebo-controlled trial, a researcher said here. Scores on standard tests of executive function and verbal memory were significantly higher in participants given tesamorelin (Egrifta), a synthetic analog of growth hormone releasing hormone (GHRH), in a 20-week trial, according to Laura D. Baker, PhD.. Participants taking the drug in the 78-person trial also reported greater subjective improvement in cognition relative to the placebo group.

In animal studies, GHRH administration improved biomarkers of brain function as well as performance on cognition tests. And a 2006 clinical trial with GHRH found small but significant improvements in cognitive test scores in healthy older adults. In the current study, funded by the National Institute on Aging, 41 cognitively normal adults and 37 with mild cognitive impairment were randomized to placebo or tesamorelin at 1 mg/day subcutaneously.

Mean participant age was 66 to 70 among the four groups. Scores on the Mini-Mental State Examination averaged 29 for the normal participants and 28 for those with mild impairments. Normal and impaired participants differed more at baseline on a test of story recall, with mean scores of 54 and 44, respectively. Tesamorelin appeared to have a protective effect relative to placebo among the cognitively impaired patients on this measure. At the final evaluation, scores declined an average of five points with placebo, whereas those assigned to tesamorelin had a mean decline of less than one point

Fat Loss and the Tesamorelin Peptide

Tesamorelin has been shown to reduce lipodystrophy in HIV-infected individuals. Lipodystrophy is a condition that causes changes in placement of body fat, including wasting and fat accumulation, and changes in metabolism. Similar to Tesamorelin is Sermorelin, which may be taken with GHRP-6 in clinical trials, that also promotes HGH production and possible fat loss. Individuals with lipodystrophy may develop excess fat most notably around the liver, stomach, and other abdominal organs (visceral body fat).

Package and Shipping Of Tesamorelin

Package: 2mg/vial, 10vials/box

Shipping: With 3-5 days after your payment

FAQ of Tesamorelin

Q1: Do you Accept Sample Order?

A: Yes. The smallest order we accept is one box.

Q2: Do you accept VISA business credit card?

A: Yes. VISA business credit card is in our payment .

Q3: Is there any discount?

A: Yes, if you want to purchase larger quantity, we can offer better price for you.

Q4: How long does it take to me if I order?

A: About 3-5 days upon receipt of payment.

Q5: What kind of transportation do you have?

A: We have many ways of transportations, eg: Air, Sea, Special Lines, TNT, FEDEX, EMS, ect.
