What Is Dsip Peptide

DSIP (Delta sleep-inducing peptide) is a well-known neuromodulator and natural sleep-promoting nonapeptide with many other physiologic functions. It is typically found in the brain and easily passes the blood-brain barrier. It has been discovered and heavily studied for over 40 years. It has been used for the treatment of poor sleep, pain conditions, stress-related symptoms, low testosterone (via stimulation of LH), and even sometimes as an antioxidant and anti-cancer protein. It exhibits a pronounced stress protective action and decreases stress-induced metabolic and functional disorders. It has also been shown in research to improve physical performance.

Benefits of Dsip Peptide

- Can restore disturbed sleep patterns
- Can promote LH and GH release

Can reduce persistent/chronic pain
Can modulate cortisol production

Conclusions of Dsip Peptide

Sleep:

DSIP has been described as a sleep-promoting substance. It is not a sedative. There is a modulating effect on sleep and wake functions with greater activity in circumstances where sleep is disturbed. There are essentially 5 stages of sleep, these can be broken down into 2 categories REM and NREM sleep. These translate to Random Eye Movement and Non-Random Eye movement sleep. The problem with many sleep aids is that they change the time or duration of these sleep cycles. The problem with this is these cycles are ALL associated with important physiological processes and anabolic hormone production. DSIP does not change these sleep stages. It increases the ability to go to sleep and offers a more restful sleep.

Hormones:

It is involved in neuroendocrine regulation and release of anterior pituitary hormones. Administration of DSIP results in a decreased the production of the undesirable stress induced hormones cortisol and somatostatin. It favorably influences the secretion of adrenocorticotrophic hormone (ACTH), luteinizing hormone (LH) and growth hormone (GH). It also plays a role in the regulation of circadian rhythms toward a more healthful physiologic balance.
