

Muscle Building Steroids Polypeptide Hormones Sermorelin 5Mg CAS 86168-78-7

Our Product Introduction

for more products please visit us on peptide-powder.com

Basic Information

- Place of Origin: China
- Brand Name: Hongbaiyi
- Certification: COA, HPLC MR
- Model Number: HBY-Sermorelin
- Minimum Order Quantity: 5 box
- Price: US \$ 50-55 / box
- Packaging Details: 5mg/vial, 10vials/box
- Delivery Time: 3-5 work days after your payment
- Payment Terms: , Western Union, T/T
- Supply Ability: 3000kg/Month

Product Specification

- Name: Sermorelin 5Mg
- CAS No.: 86168-78-7
- Chemical Formula: C149H246N44O42S
- Molecular Weight: 3357.9
- Appearance: White Lyophilized Powder
- Purity: 99.6%
- Shelf Life: 2years
- Highlight: **Polypeptide Hormones Sermorelin 5Mg, Muscle Building Polypeptide Hormones Sermorelin**
, Hormones Sermorelin 86168-78-7

Product Description

Muscle Building Steroids Polypeptide Hormones Sermorelin 5Mg CAS 86168-78-7

Basic Information Form of Sermorelin 5Mg

Product Name	Sermorelin 5Mg
CAS NO.	86168-78-7
MF	C149H246N44O42S
MW	1024.2
Appearance	White lyophilized Powder
Peptide Purity	99.2%
Shelf life	2 years

What Is Sermorelin 5Mg

Sermorelin is a GHRH (releasing hormone) peptide analogue. Its peptide sequence is comprised of 29 amino acids. This sequence is a portion of the endogenous human GHRH, and is currently considered to be the shortest synthetic peptide that possesses the full array of functional GHRH activity. Due to this fact, sermorelin is considered.

Sermorelin, in comparison, is not governed by the same strict laws of medical use and this is largely due to its safety profile. For this reason, sermorelin is much more accessible and is commonly prescribed by doctors in anti-aging and wellness clinics in conjunction with other growth hormone releasing peptides such as GHRP-2 and GHRP-6.

Sermorelin acetate is a human growth hormone-releasing hormone (GHRH or GRF) used for diagnostic evaluation of pituitary function and also for increasing growth in children. Off label usage of sermorelin acetate may include acute or age-related growth hormone insufficiency.

Even though in bodybuilding circles we don't hear much about Sermorelin, this doesn't mean that this peptide does not have its uses. In fact, anti-aging and hormone replacement clinics have been prescribing it for years because it works as a clean GHRH. The problem for the bodybuilder or athlete is that it has a very short half-life of about ten (10) minutes. This becomes an unattractive feature when compared to the half-life of MOD GRF (1-29) (CJC 1295 without DAC), which comes in around 30 minutes. Despite its short window, it does bind quite effectively to the pituitary receptors.

The other main down side associated with its very short half life is that it is quickly broken down by blood enzymes within minutes. This is why a GHRH peptide with a half life of 30 minutes or longer is desirable, since it will survive the blood enzyme death and allow it to circulate the body looking for hormone receptors to bind to.

Application Of Sermorelin 5Mg

Sermorelin has a wide range of positive effects. Due to its nature as a GHRH, sermorelin only increases the body's ability to produce more growth ; it is not an injection of hormone itself. In both a performance enhancing and general well-being sense, sermorelin has a wide array of benefits that make it a powerful and valuable substance.

Sermorelin does increase the rate of growth in GH-responsive CRF children, though it has no appreciable effect on the course of the CRF. Sermorelin can be used in research to diagnose cases of GH deficiency, stimulates GH secretion from the adenohypophysis, manage GH insufficiency and increase the rate of growth in GH-responsive CRF children.

GH also promotes efficient energy metabolism. Studies have also shown that GHRH directly promotes slow wave NREM (non-rapid eye movement) sleep, and thus GHRH insufficiency causes a reduction in the amount and intensity of slow wave NREM sleep which results in either insomnia or dysomnia (sleep disorders that causes sleep to lose its restorative capacity). inhibits GH secretion from the adenohypophysis. Both GHRH and somatostatin are produced in the same neuron but they are released in alternation to each other thereby resulting in the pulsatile release of GH from the neuron.

Sermorelin therapy increased the volume of hormone secreted by the stimulated pituitary gland, which is later converted by the liver into IGF-1. The increased amount of IGF-1 in the blood stream leads to many benefits from the use of Sermorelin: increasing metabolism and growth of new cells within the body's organs and bone.

Functions of Sermorelin 5Mg

- Increased Fat Burn
- Better Functioning Metabolism
- Amplified Endurance, Energy & Strength
- Thicker Healthier Skin
- Reduced Wrinkles & Fine Lines
- Better Quality of Sleep
- Increased Libido
- Faster Recovery Time

Package and Shipping of Sermorelin 5Mg

Package: 5mg/vial, 10vials/box

Shipping: With 3-5 days after your payment

FAQ of Sermorelin 5Mg

Q1: Do you Accept Sample Order?

A: Yes. The smallest order we accept is one box.

Q2: Do you accept VISA business credit card?

A: Yes. VISA business credit card is in our payment.

Q3: How long does it take to me if I order?

A: About 3-5 days upon receipt of payment.

Q4: Is there any discount?

A: Yes, if you want to purchase larger quantity, we can offer a better price for you.

Q5: What kind of transportation do you have?

A: We have many ways of transportations, eg: Air, Sea, Special Lines, TNT, FEDEX, EMS, ect.
