What Is Sermorelin Peptide For Sale

Sermorelin / Sermorelin Acetate is a truncated analog of a growth hormone releasing factor GRF 1-44 that is naturally produced by the brain to stimulate pituitary production of human growth hormone. The increased volume of human growth hormone produced by the pituitary gland causes an increase in the production of Insulin-Like Growth Factor-1 by the liver and results in the benefits of treatment provided to the adult patient.

Sermorelin / Sermorelin acetate is the acetate salt of an amidated synthetic 29-amino acid peptide that corresponds to the amino-terminal segment of the naturally occurring human growth hormone releasing hormone consisting of 44 amino acid residues. It stimulates the pituitary gland to naturally produce increased amounts of human growth hormone.

Sermorelin / Sermorelin acetate shares similar structure to CJC-1295, is a bio-identical synthetic hormone that is extremely effective in increasing the amount of HGH. Sermorelin acetate is a recently synthesized (man-made) peptide analogue of growth hormone releasing hormone a naturally occurring hormone that is produced in the hypothalamus and stimulates and controls the production of growth hormone within the pituitary gland.
