

99% Purity Body Building Peptides Adipotide FTPP Cas 859216-15-2

Our Product Introduction

for more products please visit us on peptide-powder.com

Basic Information

- Place of Origin: China
- Brand Name: Hongbaiyi
- Certification: COA, HPLC MR
- Model Number: HBY-Adipotide
- Minimum Order Quantity: 5box
- Price: US\$ 45-50/ box
- Packaging Details: 2mg/vial, 10vials/box
- Delivery Time: 3-5 work days after your payment
- Payment Terms: MoneyGram, Western Union, T/T
- Supply Ability: 4000kg/Month

Product Specification

- Name: Adipotide
- Formula: C111H204N36O28S2
- Molecular Weight: 2555.22
- CAS: 859216-15-2
- Appearance: White Powder
- Peptide Purity: >99%
- Shelf Life: 2 Years
- Highlight: **Body Building Peptides Adipotide FTPP, 99% Adipotide FTPP, 859216-15-2 Adipotide FTPP**

Product Description

99% Purity Body Building Peptides Adipotide FTPP Cas 859216-15-2

Basic Information Form of Adipotide

Product Name	Adipotide
Molecular formula	C111H204N36O28S2
Cas No	859216-15-2
Molecular Weight	2555.22
Purity	99%
Shelf Life	2 years
Facade	White powder
Typical use	Bodybuilding Weight Loss

Brief Introduction of Adipotide

Adipotide is a synthetic proapoptotic peptide that was previously known as Prohibitin-TP01.

In other words, it was designed in a lab for the specific purpose of combating obesity.

Despite limited research (largely on animals), peptides have been effective in losing weight during clinical studies.

Its because peptides perform a unique function by stimulating natural processes but without harmful side effects like other synthetic drugs.

Adipotide is chemically produced to target and kill all types of fat cells.

Thus, it reduces the number of fat cells by reducing the blood supply to adipocytes.

The science and medical communities have exercised far more interest in adipocytes (or fat cells) in the last few decades as a manner of reducing obesity rates in the U.S.

For this reason, Adipotide is designed to target proteins that are present on the walls of the blood cells which supply these adipocytes with refuge.

Consequently, the peptide works to burn this unwanted fat by disrupting its safe haven in the body.

Ultimately, the fat cells are reabsorbed back into the bloodstream and therefore metabolized.

Thus, fighting obesity is plausible through the use of Adipotide and other weight loss supplements.

What's more, Adipotide has not been shown to interfere with blood vessels connected to tissue and organs.

Accordingly, the side effects of Adipotide have not been nearly as severe as other types of weight loss treatment.

Regardless, medical research remains limited and thus far has only been limited to monkeys as test subjects.

Nonetheless, the results from the clinical trial were so impressive that fitness experts would like to see more research dedicated to the subject.

Be that as it may, peptides are largely ignored by the U.S. Food and Drug Administration (FDA) which is an absolute shame considering their potential.

How Does Adipotide Work?

The unique operation of Adipotide presents a lot of hope for those that struggle with being overweight or obese.

It's especially refreshing for individuals that have tried countless other diet plans or supplements in the past only to feel let down.

There are several factors in weight loss that are beyond your control (like genetics and preexisting conditions) that make it difficult to achieve the weight you desire.

Perhaps you've even tried intense cardio exercise or nearly starved yourself only to witness minimal gains?

Adipotide use does not require you to do any of that although a smart nutrition plan and regular exercise are always advised to complement any weight loss treatment.

The peptide is generally injected into the body so it can reach the bloodstream quickly.

There, it begins to work by targeting fat cells in blood vessels and sending them back into the bloodstream to metabolize.

The formula stimulates a targeted killing process of fat cells known as Apoptosis.⁴

The synthetic peptide is specifically formulated to only target certain fat cells like those in the abdomen.

Consequently, cells are killed selectively to avoid causing damage to other tissue and organs.

Adipotide is active in 2 different domains of the body.

The first domain (called the homing domain) allows the peptide to target a membrane-associated protein known as Prohibitin.

Meanwhile, the second place in the body that Adipotide targets are the membrane-disrupting domain.

Adipotide prevents mitochondrial membrane activity within targeted cells leading to the destruction of adipocytes.

Research has found the Adipotide peptide to produce rapid weight loss in animal test subjects.

Benefits of Adipotide

The benefits of Adipotide are impressive and extend beyond the world of weight loss.

Notwithstanding, the ability for Adipotide to rapidly target and burn fat cells in the blood vessels is what makes it so resourceful for losing weight.

Still, you can only achieve the full results of Adipotide by supplementing the peptide with regular exercise and a healthy diet.

Adipotide peptide is especially effective at targeting abdominal fat which is one of the most infamous locations on the body for excess weight.

Let's examine some of the other incredible benefits of Adipotide:

- Quick & Effective Fat Burner
- Removes Excess Water Retention
- Effectively Regulates Blood Pressure
- Effectively Balances Minerals in Body
- Positively Influences Insulin Sensitivity

The peptide Adipotide also offers hope to diabetics.

Why?

The peptide features a unique mechanism that can bring relief to nasty symptoms of type 2 diabetes by lowering elevated levels of blood glucose.

Those that supplement Adipotide report improvements in energy and endurance.

Additionally, there is the promise for Adipotide to one day treat high blood pressure.

More importantly, critical organs, tissue, and neurotransmitter matter does not appear to get affected by Adipotide in research studies.

Package and Shipping of Adipotide

Package: 2mg/vial, 10vials/box

Shipping: With 3-5 days after your payment

FAQ of Adipotide

Q1: How long does it take to me if I order?

A: About 3-5 days upon receipt of payment.

Q2: Do you Accept Sample Order?

A: Yes. The smallest order we accept is one box.

Q3: Do you accept VISA business credit card?

A: Yes. VISA business credit card is in our payment .

Q4: Is there any discount?

A: Yes, if you want to purchase larger quantity, we can offer better price for you.

Q5: What kind of transportation do you have?

A: We have many ways of transportations, eg: Air, Sea, Special Lines,TNT, FEDEX, EMS, ect.
