

CAS 315-37-7 Raw Material Steroids Powder Testosterone Enanthate

Our Product Introduction

Basic Information

- Place of Origin: China
- Brand Name: Hongbaiyi
- Certification: COA, HPLC MR
- Model Number: HBY-Testosterone
- Minimum Order Quantity: 1KG
- Price: Negotiable
- Packaging Details: Aluminum Bag or 25KG/Febr Drum
- Delivery Time: 3-5 work days after your payment
- Payment Terms: , Western Union, T/T
- Supply Ability: 4000kg/Month

Product Specification

- Product: Testosterone Enanthate
- MF: C₂₆H₄₀O₃
- MW: 400.6
- Cas No.: 315-37-7
- Apperance: White Powder
- Fineness: 99%
- Storage Temp: 2-8°C

Product Description

CAS 315-37-7 Raw Material Steroids Powder Testosterone Enanthate

What Is Testosterone Enanthate

Testosterone Enanthate is one of the most commonly used testosterone for low testosterone. In the performance enhancement sector is also very popular. This is one of the most affordable anabolic steroids on the market. Its function is very broad and the vast majority of adult males can tolerate its supply through the roof.

Testosterone is an anabolic steroid that is suitable for use at all levels. This is the perfect synthetic metabolic steroid for the first steroid user and is equally effective for individuals who spend a lot of time on the saddle. It will carry possible side effects, but we will also find that they are easy to control. If this is surprising, that really should not be. After all, though it is just a testosterone, a hormone, the body is not only good habit, but also vital to our health and well being.

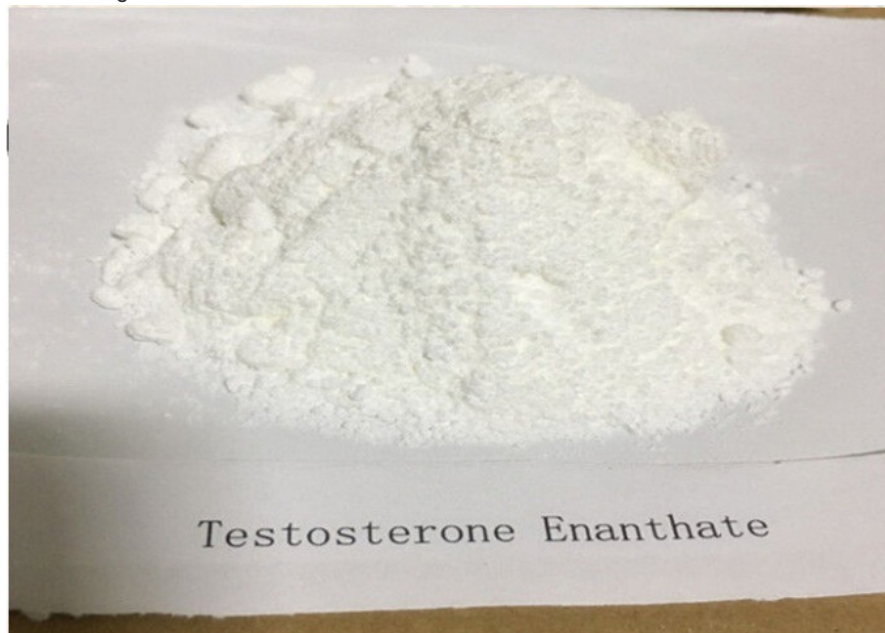

Testosterone Enanthate use for

When the body does not produce testosterone or insufficient testosterone Enanthate, the treatment of men with low testosterone symptoms. It can also be used for other conditions that your doctor has identified. It is also used to treat certain types of breast cancer in women. Testosterone Enanthate is a male sex hormone. It acts by substituting or supplementing the naturally produced testosterone. It also counteracts the role of certain types of breast cancer estrogen, which helps to reduce the growth of cancer.

Basic Information form Of Testosterone Enanthate:

Product Name	Testosterone Enanthate
Cas No.	315-37-7
Purity	99%
Appearance	White powder
Chemical Formula	C ₂₆ H ₄₀ O ₃
MW	400.6
Storage Temp	2-8°C
Melting point	34 ~ 39°

Testosterone Enanthate function and characteristics

Testosterone Enanthate is a single ester-based testosterone compound. This is a pure synthetic testosterone hormone in which a carboxylic acid ester is attached to the butyrate (penic acid). The ester itself is linked to a 17-beta hydroxy hormone. By linking the succinate, this allows the control of the duration of the activity and the total release time of the hormone. Once injected, testosterone until the ester begins to separate from the hormone. The total separation is not a one-time occurrence, but allows the active hormone to slowly and steadily release into the body. Once injected, the first 24-48 hours after injection, the testosterone will rise sharply. From here, hormones will continue to be separated and dissipated through the body. In its time frame, the half-life of testosterone succinate is about 8 days, which will allow as little as once every 2 weeks in the treatment environment. However, every 7 to 10 days will be more effective in maintaining stability.

As with all testosterone, Testosterone Enanthate has an anabolic level of 100 and an orrogen grade of 100. Testosterone is the basis for all ratings for all metabolic steroids. Unlike certain steroids, testosterone changes from structural properties to functional basis. This hormone will present a high level of anabolic and androgenic activity.

On the basis of function,, Testosterone Enanthate is the perfect remedy for the treatment of low testosterone. If you suffer from low testosterone, it simply means that your body no longer produces enough of this kind of primary androgen. Since testosterone is simple, testosterone, it will remedy low levels of condition. Millions of men around the world suffer from a certain type of low-level androgen deficiency. In the United States

alone, it is estimated that more than 20 million people suffer from androgen deficiency. Women can also suffer from low testosterone, testosterone can treat it. However, most women will better take alternative forms of testosterone therapy, such as gels containing testosterone and progesterone mixtures or small testosterone implants such as Testopel.

For men with low testosterone, many symptoms may occur. This situation may have a negative impact on the physical, mental and sexual health in a number of ways. The symptoms themselves are not life-threatening; however, it is an unhealthy condition that is very troublesome and can be an open portal for many more serious conditions. Low testosterone symptoms include:

- **Loss of Libido (can refer to partial or total loss)**
- **Erectile Dysfunction (inability to maintain or obtain an erection)**
- **Loss of Muscle Mass (despite diet & exercise)**
- **Loss of Strength (despite diet & exercise)**
- **Increased Body Fat (despite diet & exercise)**
- **Loss of Mental Clarity**
- **Decreased Ability to Focus**
- **Lethargy**
- **Insomnia**
- **Irritability**
- **Decreased Energy**
- **Depression**
- **Weakened Immune System**

The effect of Testosterone Enanthate

If you suffer from low testosterone, the role of testosterone means that you will no longer suffer from low testosterone. Symptoms related to illness will disappear and every area of your life will be improved. If you suffer from a low testosterone, you should also know that the only thing that can completely remedy the condition is through direct testosterone therapy such as testosterone.

For athletes who enhance athletes, the role of testosterone will be very extensive and will run through all aspects of performance. The direction you go will depend on your diet and training. This is not an expansion of steroids or cut steroids; it is just a steroid that can be used for supplemental purposes.

For off-season individuals, very few can promote lean growth of synthetic metabolic steroids, such as testosterone. As long as you can consume enough calories, the individual can pack raw materials in large proportions. You have to eat, to grow up, you need to train. This is not a magical addition, nor is there any magical synthesis of metabolic steroids, despite the popular view. Because you will be able to pack a lot of size, as a bonus, you will be able to do so, to reduce the accumulation of body fat, otherwise it will happen. High levels of testosterone can greatly improve the overall metabolic rate of the individual. It is not the purpose of eating a permit, you can still get obese, but you should be able to make better use of your calories.

Then we have a cutting cycle that testosterone offers a high level of testosterone that can prove to be priceless. In order to lose weight, we must consume more calories than to consume. You can eat the most healthy food on earth, exercise for four hours a day, but if you consume more than you burn, you will not lose any fat. Due to the necessary calorie restriction, this can make our lean muscle mass at risk. The body will meet its energy needs from any energy demand that can be obtained, which can include muscle tissue. The well-planned diet will be designed not to burn the body fat, but as we become thinner, the body will begin to keep the body fat and get the amount needed from the muscle tissue due to its survival instincts. By supplementing testosterone succinate, a significant increase in anabolic effect will protect this lean tissue and ensure that we can only burn body fat. But also to see our metabolism greatly enhanced, so that we burn more body fat at a more efficient rate.

All people who use steroids can enjoy the ultimate effect of Testosterone Enanthate, regardless of their direct use of purpose. High levels of testosterone will result in greater muscle endurance. You will not be so fast, and have the ability to do more work. You will also find that your overall recovery rate is greatly improved, which is critical to progress. The gym did not progress. When we train we actually tear off the muscle tissue. Is through recovery, we progress. This makes the compounds like testosterone testosterone not only for bodybuilders and leisure and fitness mice is very valuable, but also for the athletes is also very valuable. Endurance and recovery are two key factors in the performance of successful campaigns. In addition, high testosterone levels increase the strength of the individual. This is obviously an advantage of an athlete and is very popular in the off-season for the improvement of physical fitness. In a calorie-restricted diet, especially in a harsh diet of competitive bodybuilding, if any force increases, the individual should not expect much, but he should be able to maintain more power.

Package and Shipping Of Testosterone Enanthate:

Under 25kg: inner: A PE bag in aluminum foil bag; Outside: carton

Over 25kg: inner: Double PE bags; Outside: 25kg/ fibre drum

Shipping:

With 3-5 days after your payment
