

99% Enanthate Testosterone Powder Injectable Test E Steroids Powder

Our Product Introduction

for more products please visit us on peptide-powder.com

Basic Information

- Place of Origin: China
- Brand Name: Hongbaiyi
- Certification: COA, HPLC MR
- Model Number: HBY-Testosterone
- Minimum Order Quantity: 1KG
- Price: Negotiable
- Packaging Details: Aluminum Bag or 25KG/Febr Drum
- Delivery Time: 3-5 work days after your payment
- Payment Terms: , Western Union, T/T
- Supply Ability: 4000kg/Month

Product Specification

- Product: Testosterone Enanthate For Sale
- Cas No.: 315-37-7
- Molecular Formula: C₂₆H₄₀O₃
- Molecular Weight: 400.6
- Apperance: White Powder
- Purity: 99%
- Storage Temp: 2-8°C
- Melting Point: 34-39°C
- Highlight: 99% Enanthate Testosterone Powder ,
99% Injectable Test E,
Injectable Test E Steroids Powder

Product Description

High Purity Injectable Test E Steroids Powder Testosterone Enanthate For Sale

Basic Information form Of Testosterone Enanthate For Sale:

Product Name	Testosterone Enanthate For Sale
Cas No.	315-37-7
Purity	>99%
Appearance	White powder
Chemical Formula	C ₂₆ H ₄₀ O ₃
Molecular Weight	400.6
Storage Temp	2-8°C
Melting point	34 ~ 39°
Shelf life	2 years

What Is Testosterone Enanthate For Sale:

Testosterone enanthate is a slow acting ester with a release time between 8-10 days. Testosterone enanthate is typically injected anywhere between once every week to once every three weeks. Testosterone propionate is a fast-acting ester with a release time of 3-4 days. To keep blood levels from fluctuating greatly, testosterone propionate is usually injected between one to three times a week.

Testosterone Enanthate is an anabolic steroid that is perfect for low testosterone . If your body is cannot produce enough testosterone ,you could suffer from low testosterone .

How does enanthate affect the body?

A longer period of active action of testosterone is provided by esterification by hydrolysis in vivo. Testosterone Enanthate provides a genomic and non-genomic effect on the human body. It depends on the mediator action of androgen receptors and gene transcription. Androgens in the male body provide normal growth and formation of the external and internal genital organs. A high concentration of androgens contributes to the retention of compounds of nitrogen, sodium, potassium and phosphorus. Their effect helps reduce calcium excretion along with urine. Nitrogen balance is observed only with sufficient intake and content of protein and food calories.

Androgens are essential for the body throughout the life of a man. In childhood, exogenous androgens contribute to linear growth. Their excessive concentration can provoke a disproportionate development of bones. If the drug is used for too long, it is possible to merge the epiphyseal growth centers with its subsequent cessation. In adolescents, androgens are responsible for a growth spurt. In the future, linear growth stops. Androgens affect the processes of erythropoiesis and the production of red blood cells.

With the introduction of testosterone enanthate, inhibition of feedback occurs with subsequent suppression of the synthesis of luteinizing hormone. LH is secreted by the pituitary gland. Exceeding permissible norms may cause excessive inhibition of follicle-stimulating hormone and suppression of normal spermatogenesis.

Effects Of Testosterone Enanthate For Sale:

The severity of the anabolic action of the enanthate depends on the amount administered. Typically, a high dose provides a better result. Testosterone enanthate has a number of effects on the body:

- positive effect on the health and mobility of the joints;
- increase in power parameters;
- noticeable build-up and preservation of muscle mass;
- activates the mechanisms of cell regeneration;
- enhances sex drive;
- increases blood supply to muscles, which indicates a high pumping effect;
- stimulates the general tone, increases the desire for training;
- helps to quickly burn fat, prevents the appearance of fat cells;

- activates anabolism;
- inhibits the destruction of proteins;
- increases the speed of metabolic processes;
- activates the production of own glycogen;
- significantly reduces the length of the recovery period between intense strength training;
- in women, relief of menopause symptoms is noted;
- causes atrophy of endometrial cells;
- contributes to the development of male-type hair growth – a beard, mustache, hair on the chest, pubis and in the armpit area appear.

Professional pitching and beginners like testosterone because it works on everyone. Regenerative properties are expressed in it so that the mechanisms of renewal of the body work constantly. Athletes using enanthate note a very quick action, a surge of vitality, an increase in overall tone. The body receives a huge amount of energy, therefore, significantly accelerates the periods of compensation. On testosterone, many athletes are able to train up to 6 times a week, twice a day. As a rule, workouts last several hours. The body responds to these processes with constant growth and conservation of mass and strength.

Package and Shipping Of Testosterone Enanthate For Sale:

Under 25kg: inner: A PE bag in aluminum foil bag; Outside: carton

Over 25kg: inner: Double PE bags; Outside: 25kg/ fibre drum

Shipping:

With 3-5 days after your payment

FAQ Of Testosterone Enanthate For Sale:

Q1: Do you Accept Sample Order?

A: Yes. The smallest order we accept is 1kg.

Q2: Do you accept VISA business credit card?
