

Male Hormone Test Enanthate Healthy Mass Building Steroids CAS 315-37-7

Our Product Introduction

for more products please visit us on peptide-powder.com

Basic Information

- Place of Origin: China
- Brand Name: Hongbaiyi
- Certification: COA, HPLC MR
- Model Number: HBY-Testosterone
- Minimum Order Quantity: 1KG
- Price: Negotiable
- Packaging Details: Aluminum Bag or 25KG/Febr Drum
- Delivery Time: 3-5 work days after your payment
- Payment Terms: , Western Union, T/T
- Supply Ability: 4000kg/Month

Product Specification

- Product: Test Enanthate
- Cas No.: 315-37-7
- Molecular Formula: C₂₆H₄₀O₃
- Molecular Weight: 400.6
- Purity: 99%
- Storage Temp: 2-8°C
- Apperance: White Powder
- Melting Point: 34-39°C
- Shelf Life: 2 Years
- Highlight: **Male Hormone Test Enanthate, Mass Building Test Enanthate, 315-37-7 Male Hormone Test E**

Product Description

Male Hormone Test Enanthate Healthy Mass Building Steroids CAS 315-37-7

Basic Information form Of Test Enanthate:

Product Name	Test Enanthate
Cas No.	315-37-7
Purity	>99%
Appearance	White powder
Molecular Formula	C ₂₆ H ₄₀ O ₃
Molecular Weight	400.6
Storage Temp	2-8°C
Melting point	34 ~ 39°
Shelf life	2 years

What Is Test Enanthate:

- 1). Testosterone Enanthate is one of the most popular form of prescribed everywhere in the world. Testosterone Enanthate steroids are very concentrated forms of hormonal substance that is why it can boost the levels in the body very quickly. Athletes take exogenous to increase muscle strength and size. Results indicated that weekly injections of the hormone decreased waist size and body weight. Supplement use also improved the men's sexual performance. The treatment was considered safe, as no malignancies were observed during biopsies
- 2). Using Testosterone Enanthate is a very effective way to increase the production hormones in the body. Furthermore, it is also beneficial to athletes and body builders as they can develop muscle mass quickly to be able to carry out maximum performance.
- 3). Testosterone Enanthate is best suitable for muscle builders and sportsmen looking to gain the advantages of efficiency improving medications without the severe adverse reactions.

Applications Of Test Enanthate:

Testosterone enanthate is one of the main forms prescribed in the United States. It is a slow-acting ester with a release time between 8-10 days. Testosterone enanthate is typically injected anywhere between once every week to once every three weeks. Testosterone propionate is a fast-acting ester with a release time of 3-4 days. To keep blood levels from fluctuating greatly, propionate is usually injected between one to three times a week.

Test Enanthate is the most popular form prescribed everywhere in the world except for the United States, where the very similar Testosterone Cypionate is typically preferred. Testosterone Enanthate has a release time of between 8-10 days. It is typically injected once every one to three weeks, though some users opt for a twice a week frequency as well. This version will cause the usual side effects associated, including: hair loss, acne, gynecomastia and eventual cessation of the body's natural production. Many of these side effects can be associated (if not totally attributed) with the conversion into estrogen.

Test is the most common anabolic hormone that there is and is also considered the most basic. Due to this, bodybuilders often consider it the base steroid to most all cycles. Users of this steroid will notice a dramatic gain in muscle size and strength, as well as an overall sense of well being and increases libido and drive.

Test aromatizes very easily and therefore estrogen buildup and side effects can become an issue for users sensitive to these problems or those choosing to use a high dose of this compound. Extremely sensitive users, or users using very high doses (800-1200mgs) might find that stronger anti-estrogens such as are more suitable. Androgenic side effects such as oily skin are also possible .

Bodybuilders looking to bulk up, often stack Testosterone Enanthate with other steroids such as Nandrolone Decanoate, along with an oral compound such as Dianabol.

Test use will quickly shut down the body's natural production of the hormone, thus making a proper PCT plan essential for restoring the body's natural function and maintaining gains as best as possible after use of the steroid has been discontinued. At cycle's end, bodybuilders often choose to use a combination of Clomid for a period of 3-4wks in order to restore pituitary gland and testes operation quickly and effectively.

The male bodybuilder's dosage of this steroid would typically be in 500-1250mg per week range and cycle duration would be from 8-20 weeks, depending of course on the goals of the athlete. Women typically see desirable results from doses of 50-100mgs per week.

Package and Shipping Of Test Enanthate:

Under 25kg: inner: A PE bag in aluminum foil bag; Outside: carton

Over 25kg: inner: Double PE bags; Outside: 25kg/ fibre drum

Shipping:

With 3-5 days after your payment

FAQ Of Test Enanthate :

Q1: Do you Accept Sample Order?

A: Yes. The smallest order we accept is 1kg.

Q2: Do you accept VISA business credit card?

A: Yes. VISA business credit card is in our payment.

Q3: Is there any discount?

A: Yes, if you want to purchase larger quantity, we can offer a better price for you.

Q4: How long does it take to me if I order?

A: About 3-5 days upon receipt of payment.

Q5: What kind of transportation do you have?

A: We have many ways of transportations, eg: Air, Sea, Special Lines, TNT, FEDEX, EMS, ect.
