

Androgenic Hormone Testosterone Powder Test Cyp Steroid For Bodybuilding

Our Product Introduction

for more products please visit us on peptide-powder.com

Basic Information

- Place of Origin: China
- Brand Name: Hongbaiyi
- Certification: COA, HPLC MR
- Model Number: HBY-Testosterone
- Minimum Order Quantity: 1KG
- Price: Negotiable
- Packaging Details: Aluminum Bag or 25KG/Febr Drum
- Delivery Time: 3-5 work days after your payment
- Payment Terms: , Western Union, T/T
- Supply Ability: 4000kg/Month

Product Specification

- Product: Testosterone Cypionate
- Molecular Formula: C₂₇H₄₀O₃
- Molecular Weight: 412.60
- Cas No.: 58-20-8
- Purity: >99%
- Melting Point: 98.5-104°C
- Apperance: White Powder
- Shelf Life: 2 Years
- Highlight: **Androgenic Hormone Testosterone Powder, Bodybuilding Test Cyp Steroid, Androgenic Hormone Test Cyp Steroid**

Product Description

Testosterone Anabolic Steroid Testosterone Cypionate For Bodybuilding

Basic Information form Of Testosterone Cypionate For Bodybuilding :

Product Name	Testosterone Cypionate For Bodybuilding
Cas No.	58-20-8
Purity	>99%
Appearance	White powder
MF	C ₂₇ H ₄₀ O ₃
MW	412.60
Melting point	98.5-104°C
Shelf life	2 years

What Is Testosterone Cypionate For Bodybuilding:

Testosterone cypionate is a long acting, single ester testosterone product. It has a length of 8 carbons, and is stored mostly in the adipose tissue when injected intra-muscularly. It is slowly and steadily released in the body after it is injected. The blood levels of cypionate peak 24-48 hours after injection and then decline slowly. The blood levels reach a steady point 12 days after initial injection and stay there for over three weeks. Cypionate is normally injected once a week, which makes the very lowest dose higher than half the peak dose at any given time. Any testosterone, as the king of mass builders, are cost effective products and important for any steroid stack. Used alone, the user can expect to see some significant gains. The long acting nature of cypionate allows the user to inject less frequently while maintaining stable blood levels.

A long acting testosterone ester will be very helpful for your bulking needs, and cypionate is a product which is more simple than some of the other steroids out there. Not to say it is without its share of complications, but it's a good choice, especially for those new to enhanced bodybuilding. Discontinuing the product is not an option in case side effects occur, because it will continue to aggravate these side effects over extended periods of time due to the long length of action of this steroid. Ancillary drugs such as nolvadex, proviron, clomid and HCG may help, both during cycle and post cycle to help restore natural testosterone production. Testosterone cypionate does aromatize slightly more than sustanon, but when using either drug, one should be familiar with anti-estrogens such as nolvadex or clomid and use one of them when symptoms of gyno occur.

Application Of Testosterone Cypionate For Bodybuilding

Testosterone Cypionate is a highly anabolic and androgenic hormone making it a great steroid to use if one is in pursuit of more size and strength. Testosterone Cypionate promotes nitrogen retention in the muscle and the more nitrogen the muscles hold the more protein the muscles store. Testosterone Cypionate can also increase the levels of another anabolic hormone, IGF-1 in muscle tissue providing even more anabolic activity. Testosterone Cypionate also has the amazing ability to increase the activity of satellite cells. These cells play an active role in repairing damaged muscle. Testosterone also binds to the androgen receptor to promote androgen receptor dependent mechanisms for muscle gain and fat loss.

Testosterone Cypionate induces changes in shape, size and can also change the appearance and the number of muscle fibers. Androgens like testosterone can protect your hard earned muscle from the catabolic (muscle wasting) glucocorticoid hormones, in-turn inhibiting the related adverse reactions. In addition, Testosterone Cypionate has the ability to increase red blood cell production and a higher red blood cell count will improve endurance through increased oxygenation in the blood. More red blood cells can also improve recovery from strenuous physical activity. Even so, Testosterones anabolic/androgenic effects are dose dependent; the higher the dose the higher the muscle building effect.

Many athletes display massive strength gains while using Testosterone Cypionate as the hormone improves muscle contraction by increasing the number of motor neurons in muscle and improves neuromuscular transmission. It also promotes glycogen synthesis providing more fuel for intense workouts thereby increasing endurance and strength.

The Effects Of Testosterone Cypionate For Bodybuilding

It increases muscle growth

Greatly improves strength

It affects the growth of appetite

Calls desire to train

It reduces joint pain

Does strengthen bone

Package and Shipping Of Testosterone Cypionate For Bodybuilding:

Under 25kg: inner: A PE bag in aluminum foil bag; Outside: carton

Over 25kg: inner: Double PE bags; Outside: 25kg/ fibre drum

Shipping:

With 3-5 days after your payment

FAQ Of Testosterone Cypionate For Bodybuilding:

Q1: Do you Accept Sample Order?

A: Yes. The smallest order we accept is 1kg.

Q2: Do you accept VISA business credit card?

A: Yes. VISA business credit card is in our payment.

Q3: Is there any discount?

A: Yes, if you want to purchase larger quantity, we can offer a better price for you.

Q4: How long does it take to me if I order?

A: About 3-5 days upon receipt of payment.

Q5: What kind of transportation do you have?

A: We have many ways of transportations, eg: Air, Sea, Special Lines, TNT, FEDEX, EMS, ect.
