

Male Sex Hormone Powder Test Cyp 250mg CAS 58-20-8

Our Product Introduction

for more products please visit us on peptide-powder.com

Basic Information

- Place of Origin: China
- Brand Name: Hongbaiyi
- Certification: COA, HPLC MR
- Model Number: HBY-Testosterone
- Minimum Order Quantity: 1KG
- Price: Negotiable
- Packaging Details: Aluminum Bag or 25KG/Febré Drum
- Delivery Time: 3-5 work days after your payment
- Payment Terms: , Western Union, T/T
- Supply Ability: 4000kg/Month

Product Specification

- Product: Testosterone Cypionate 250mg
- Cas No.: 58-20-8
- Molecular Formula: C₂₇H₄₀O₃
- Molecular Weight: 412.60
- Appearance: White Powder
- Fineness: 99%
- Shelf Life: 2 Years
- Highlight: Sex Hormone Test Cyp 250mg,
58-20-8 Test Cyp 250mg, 58-20-8 test cyp 250

Product Description

Male Sex Hormone Powder Test Cyp Testosterone Cypionate 250mg CAS 58-20-8

Basic Information form Of Testosterone Cypionate 250mg :

Product Name	Testosterone Cypionate 250mg
Cas No.	58-20-8
Purity	99%
Appearance	White powder
MF	C ₂₇ H ₄₀ O ₃
MW	412.60
Shelf life	2 years

What Is Testosterone Cypionate 250mg:

Testosterone cypionate acid is a long-acting maternal hormone testosterone with the adjuvant cypionate delayed its release into the body. Testosterone is the most effective and naturally occurring androgen formed in the human body. It is responsible for the unique characteristics of men and their traits.

Testosterone cypionate is very similar to ketopentanoic acid heptanoate. Although the half-life and the active life cycle are different, they are similar. Injections are usually less frequent cypionate. Testosterone is the king of all large builders, and for this purpose is also quite cost effective. It works alone or stacks to create a great expansion cycle. Because of its conversion to DHT, it has a high risk of side effects, and has the potential to form estrogen, leading to men's breast development. These characteristics also make it have this excellent quality build tendency. Because of some other side effects, such as water retention, it may not be best to use lean meat alone, but with the expansion, adding a lot of muscle, as well as some gain of fat and water. This is a natural part of the expansion of the typical and enhanced bodybuilders.

Weekly doses of 200-100 mg are usually tested with testosterone cypionate, with excellent results found in the middle of the first user about 500 mg or less, for more advanced athletes 500-1000 mg per week. Testosterone is good with anything and is good when used alone. When combined with another synthetic metabolic-androgen-like steroid, significant androgen effects are seen. The use of cypionate will improve the regeneration capacity and training aggressiveness, which results in a significant increase in total strength during the cycle.

Testosterone cyclopentanoate is a long-acting monoester testosterone product. It has 8 carbon lengths and is predominantly stored in adipose tissue when intramuscularly. It is injected slowly and stably in the body after injection. At 24-48 hours after injection, the blood level of the cyclophosphate reached its peak and then decreased slowly. At 12 days after the initial injection, the blood level reached a stable point and remained there for more than three weeks. Typically, cyclophosphamide is injected once a week, which makes the lowest dose higher than half the peak dose at any given time. Any testosterone, as a king of large-scale builders, is cost-effective products and important for any steroid heap. For use alone, the user can expect to see some significant gain. The long-term nature of cypionate allows the user to inject less frequently, while maintaining a stable blood level.

Testosterone cyclopentanone is a good choice for first steroid users. A simple cycle consists of 500 milligrams of cyclopentaproic acid per week for 10 weeks, assisted hands, the standard post-circulation therapy, which is a good first cycle that can create some excellent muscle mass gain. As these gains will yield some revenue on fat and water leases, it is an added standard part that should be expected. Since the injection frequency is minimized while maintaining a stable level of vitamin, the heptanoate or cyclopentachlorate is generally preferred to exceed the first cycle of the vitamin. For maximum efficiency, vitamins are usually injected daily or every other day. It is not necessary because of its extreme use of length using cypionate.

Effective Of Testosterone Cypionate 250mg

Users note:

When this long-acting version of testosterone is injected, it becomes stored in what is known as a depot in the body, and slowly released over a short period of time. Peaking within 1-2 days after injection, the testosterone is then steadily released over the next 12 days and completely tapers out after approximately 3 weeks.

Testosterone is responsible for promoting health and wellness by enhancing libido, energy, immunity, increasing fat reduction, gaining and maintaining lean muscle mass, preventing osteoporosis (loss of bone mineral density) and possible anti-heart disease protection. Testosterone is also responsible for the normal growth and development of male sexual organs and the maintenance of secondary features. The secondary feature is the separation of the specific traits of the sexes, but not the direct part of the reproductive system, such as: chest and facial hair, obvious jaw lines, wide shoulders and increased muscle mass. Testosterone binds to the androgen receptor (AR), causing accelerated muscle increase, reduced fat and muscle repair and growth. These mechanisms are activated by activating the androgen receptor (either directly or as DHT) and by hormone cascade.

There are many possible side effects associated with the use of testosterone Cypionate. The product has a high level of aromatization of estrogen and DHT (dihydrotestosterone) covering. Estrogens are female sex hormones, and too much can cause high risk of male breast development (male breast tissue formation), water retention and other undesirable side effects. DHT can cause male baldness and acne. In addition, the addition of testosterone to your body will lead to the closure of the body's natural production of hormones. The severity of side effects depends primarily on the level and duration of circulating free testosterone and its conversion to other hormones. The metabolic / androgen effect (and side effects) of testosterone depends on the dose, the higher the dose, the higher the muscle build-up effect.

Testosterone Cypionate is one of the best known human beings to build synthetic metabolites, and is strongly recommended as the basis for any large-scale construction cycle. The effective dose of the drug to humans is 200-2000 mg per week. The effective dose of a woman (want to be a man) is similar. Other women (ie women who do not want to be male) should avoid using this compound.

User comments

Testosterone testosterone is the most common form of testosterone in the United States. In fact, it is a rare finding outside of the United States, where most parts of the world are postponed to very similar testosterone heptanoate.

In fact, I used both and found that there was no difference between the two. With regard to the results of any long testosterone, testosterone Cypionate is the same. In the original "Underground Steroid Handbook", Dan Duchaine said that users can feel more "kick" from this form than "Enanthate", but I really did not find this to be a real individual.

The main advantage of this product is that testosterone Cypionate can be injected once a week, and it has some very good gain in strength and size. I bet that many professional fitness and athletics are built with long term use of this medicine. I have used it for a dose of 250-2,000 mg per week and found that the best gains and side effects may have a mark below 750 mg / week. Of course, this is far lower than fitness using many of the upper competitors, but for average (recreational) athletes or athletes, the side effects above this dose do not constitute an acceptable trade-off.

Package and Shipping Of Testosterone Cypionate 250mg:

Under 25kg: inner: A PE bag in aluminum foil bag; Outside: carton

Over 25kg: inner: Double PE bags; Outside: 25kg/ fibre drum

Shipping:

With 3-5 days after your payment

FAQ Of Testosterone Cypionate 250mg:

Q1: Do you Accept Sample Order?

A: Yes. The smallest order we accept is 1kg.

Q2: Do you accept VISA business credit card?

A: Yes. VISA business credit card is in our payment.

Q3: Is there any discount?

A: Yes, if you want to purchase larger quantity, we can offer a better price for you.

Q4: How long does it take to me if I order?

A: About 3-5 days upon receipt of payment.

Q5: What kind of transportation do you have?

A: We have many ways of transportations, eg: Air, Sea, Special Lines, TNT, FEDEX, EMS, ect.
